

The Iterative Design Process

Prof. Lydia Chilton
COMS 4170
23 March 2022

Raise your hand or type in zoom

Given specifications, you can create interactions

Part 1 – Usable Functionality:

1. Menu/Navigation.

- For consistency, all the templates should be rendered with a shared template that contains a navbar.
- The navbar should contain:
 - A home link (at the "/" route)
 - A text box to enter a search query and a "go" button (at the "/search" route). When the user presses enter on the search bar it should also "go".
 - A create link (at the "/create" route)

2. Home. The home link should render at the "/".

- It should contain a one sentence summary of the mission of the site. This mission should make it clear who the intended user is and what specific goal it helps them achieve.
- It should show the latest 10 entries added to the database to entice the viewer to click on something and start exploring.
- Each of the 10 entries should be formatted as a Bootstrap Card that contains an image and the title of the item. If there is some other essential field, it can show that too, but it should not show all the data fields – it's meant to be a summary.
- When you click the image, it should take you to the page for viewing the item.

3. Search. When the user presses "go" on the search link (or presses enter), it should search for the items and return a list of all matching results.

- Flexibility.** The query must do substring matching that is not case sensitive on the title and one other text field.
- Feedback.** In addition to returning the results, the page must say how many results there are. If there are zero results, you don't need to do anything other than say there are zero results.
- Feedback.** When you present the results to the user, the bit that matches the substring must be easy to scan for, according to gestalt principles.

4. State/Options/Transitions. On the template for creating a new database item, you will still have input boxes for all the fields the user must input. In addition:

- Error Detection.** When creating a new database entry, there must be error handling on all the fields. If the field must be a number, then ensure it is a number. At the very least, you can check that the field is not blank (remember to trim the text to test if it's blank). Design the error feedback so that it directs the user's attention to the right place to correct the error.
- Transitions.** After the user presses "submit" and the data successfully submits, allow the user to either view the item or enter a new item.
 - At the top of the page it should say, "New item successfully created." With a button or link that says "see it here" (or words to that effect). This links to a page for viewing the item.
 - Additionally, the input boxes should clear and the focus should be placed on the first text box so the user is ready to submit another item.

5. State/Options/Transitions. There will no longer be a separate /edit/<id> route. Editing will now be done in /view/<id>

- For each field that can be edited, create a small edit icon next to it. (at least two fields must be editable – including one that is involves changes the text)
- State Change.** When the user presses the "edit" icon the field to be edited, it must immediately turn editable with a "submit" and "discard changes" option.
- Options.** The chosen text must disappear, and in its place, there should be a textbox or text input with the text they way to edit, with the focus in the input field.
- Transitions.** After the users presses "submit" or "discard changes" the page should go back to how it looked when they were viewing it (and not editing it).
- Note: If your "update" was to add a review to a list, you don't need to populate the textbox with any text. You may call it "add review" instead of "edit" if you like.

6. User control and freedom (Undo).

- The user should no longer be able to delete entire database items from the search page.

The next step is to become a user interface designer.

Part 1 – Usable Functionality:

1. Menu/Navigation.

- For consistency, all the templates should be rendered with a shared template that contains a navbar.
- The navbar should contain:
 - A home link (at the "/" route)
 - A text box to enter a search query and a "go" button (at the "/search" route). When the user presses enter on the search bar it should also "go".
 - A create link (at the "/create" route)

You identify the user

2. Home.

- The home link should render at the top of the page.
- It should show the latest 10 entries added to the database to entice the viewer to click on something and start exploring.
- Each of the 10 entries should be formatted as a Bootstrap Card that contains an image and the title of the item. If there is some other essential field, it can show that too, but it should not show all the data fields – it's meant to be a summary.
- When you click the image, it should take you to the page for viewing the item.

You identify a problem

3. Search.

- When the user presses "go" on the search link (or presses enter), it should search for the items and return a list of all matching results.
- Feedback. When you present the results to the user, the bit that matches the substring must be easy to scan for, according to gestalt principles.

You find the solution

4. State/Options/Transitions.

- On the template for creating a new database item, you will still have input boxes for all the fields the user must input. In addition:
 - Error Detection.** When creating a new database entry, there must be error handling on all the fields. If the field must be a number, then ensure it is a number. At the very least, you can check that the field is not blank. Remember to trim the input before checking for blank. If you have a text field, you can check for a minimum length. If you have a text field, you can check for a maximum length. If you have a text field, you can check for a minimum length. If you have a text field, you can check for a maximum length.
 - At the top of the page it should say, "New item successfully created." With a button or link that says "see it here" (or words to that effect). This links to a page for viewing the item.
 - Additionally, the input boxes should clear and the focus should be placed on the first text box so the user is ready to submit another item.

5. State/Options/Transitions.

- There will no longer be a separate /edit/<id> route. Editing will now be done in /view/<id>
- For each field that can be edited, create a small edit icon next to it. (at least two fields must be editable – including one that involves changes the text)
- State Change.** When the user presses the "edit" icon the field to be edited, it must immediately turn editable with a "submit" and "discard changes" option.
- Options.** The chosen text must disappear, and in its place, there should be a textbox or text input with the text they way to edit, with the focus in the input field.
- Transitions.** After the users presses "submit" or "discard changes" the page should go back to how it looked when they were viewing it (and not editing it).
- Note: If your "update" was to add a review to a list, you don't need to populate the textbox with any text. You may call it "add review" instead of "edit" if you like.

What is design?

A method for understanding & solving people's problems

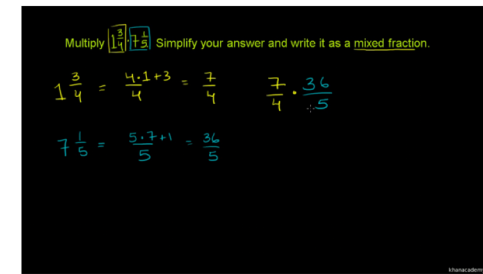

*“Design is a plan for arranging elements
to accomplish a particular purpose.”*

– Charles Eames

Science is a method for understanding the universe

Design is a method for understanding and solving people's problems

Design is a process where you work with users to understand their problems...

What's wrong?

I just don't get what to do.

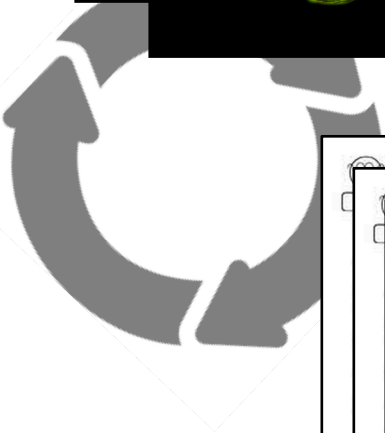

And test solutions with users until it solves the problem.

Rewrite each fraction with a denominator of 10.

1/5 2/10 2/10

khanacademy.org

The Double Diamond Process

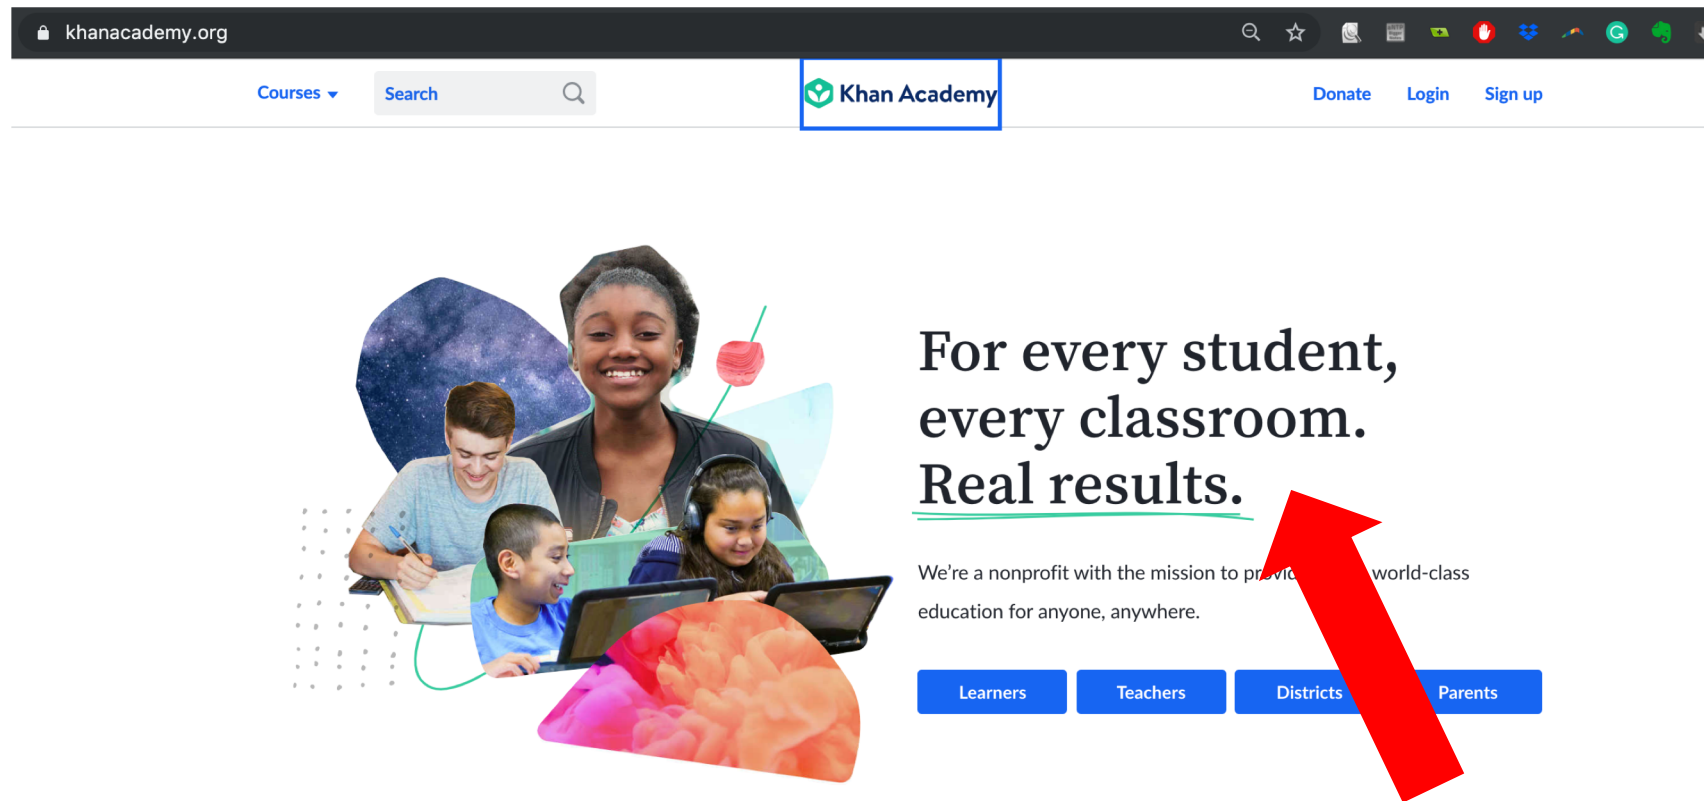

The three massive mistakes in the design process

1. Starting big.
2. Assuming you understand the problem
3. Assuming the process is linear.

Don't start big. Start small.

These videos became Khan Academy.

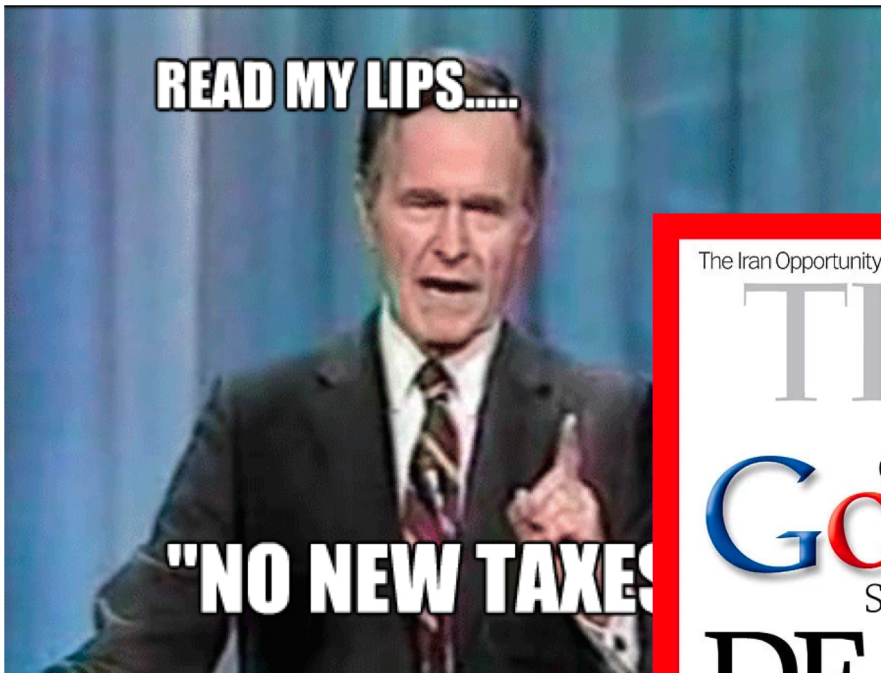

Very general problem

What are the kinds of things
Politicians, Beauty Queens, and Silicon Valley
say they will solve?

What are the kinds of things
Politicians, Beauty Queens, and Silicon Valley
say they will solve?

What's appealing about general goals?

What's the problem with general goals?

They aren't actionable.

General Vs. Specific Goals

Goal 1:

“Clean the house.”

Goal 2:

“Fold that basket of laundry.”

General goals sound appealing, but specific goals are actionable:
What **person** is going to execute what **action** on
what **object** and get what **value**?

General goals are actually Domains

Domain:

“Clean the house”

Specific goal:

“Fold that basket of laundry.”

What's the risk with a specific goal?

“Fold that basket of laundry.”

Specific goals can be trivial.

But, if you start specific,
you can usually generalize

If you start specific, you can usually generalize later.

Domain

Online shopping

Specific Need

Uncommon books

Generalized to

Clothes, Food, Amazon Fresh
Other sellers

Social Networking

If you start specific, you can usually generalize.

Graphic Design
For novices

High School
Yearbooks

Posters,
flyers, ads

Starting with a specific person and problem allows you to understand the problem and test various solutions.

Math test paper titled "Fraction Test: Review of Fraction Concepts".

Compare the fractions (or $>$, $=$, or $<$):

- $6\frac{10}{12}$ and $6\frac{11}{12}$
- $9\frac{3}{4}$ and $8\frac{6}{8}$
- $8\frac{8}{8}$ and $11\frac{1}{2}$
- $4\frac{1}{3}$ and $4\frac{1}{2}$
- $3\frac{12}{18}$ and $3\frac{5}{9}$
- $8\frac{5}{10}$ and $8\frac{6}{9}$

Calculate (reduce to smallest terms):

- $1\frac{1}{2} \times 2\frac{2}{3} =$
- $8\frac{1}{2} - 5\frac{2}{3} =$
- $4\frac{1}{4} - 2\frac{3}{4} =$
- $7\frac{2}{3} - 4\frac{4}{6} =$
- $9\frac{1}{3} + 3\frac{2}{3} =$
- $7\frac{1}{3} + 3\frac{1}{3} =$
- $2\frac{5}{6} \times 1\frac{2}{3} =$
- $2\frac{1}{3} \times 7\frac{1}{3} =$
- $4\frac{2}{3} \times 3\frac{1}{3} =$
- $4\frac{3}{4} \times 2\frac{1}{4} =$
- $9\frac{1}{3} - 7\frac{2}{3} =$
- $6\frac{1}{3} + 9\frac{1}{3} =$

Simplify the Fractions:

- $\frac{12}{18} =$
- $\frac{13}{18} =$
- $\frac{21}{30} =$
- $\frac{11}{4} =$
- $\frac{12}{18} =$
- $\frac{22}{30} =$
- $\frac{18}{30} =$
- $\frac{11}{4} =$

- Parents

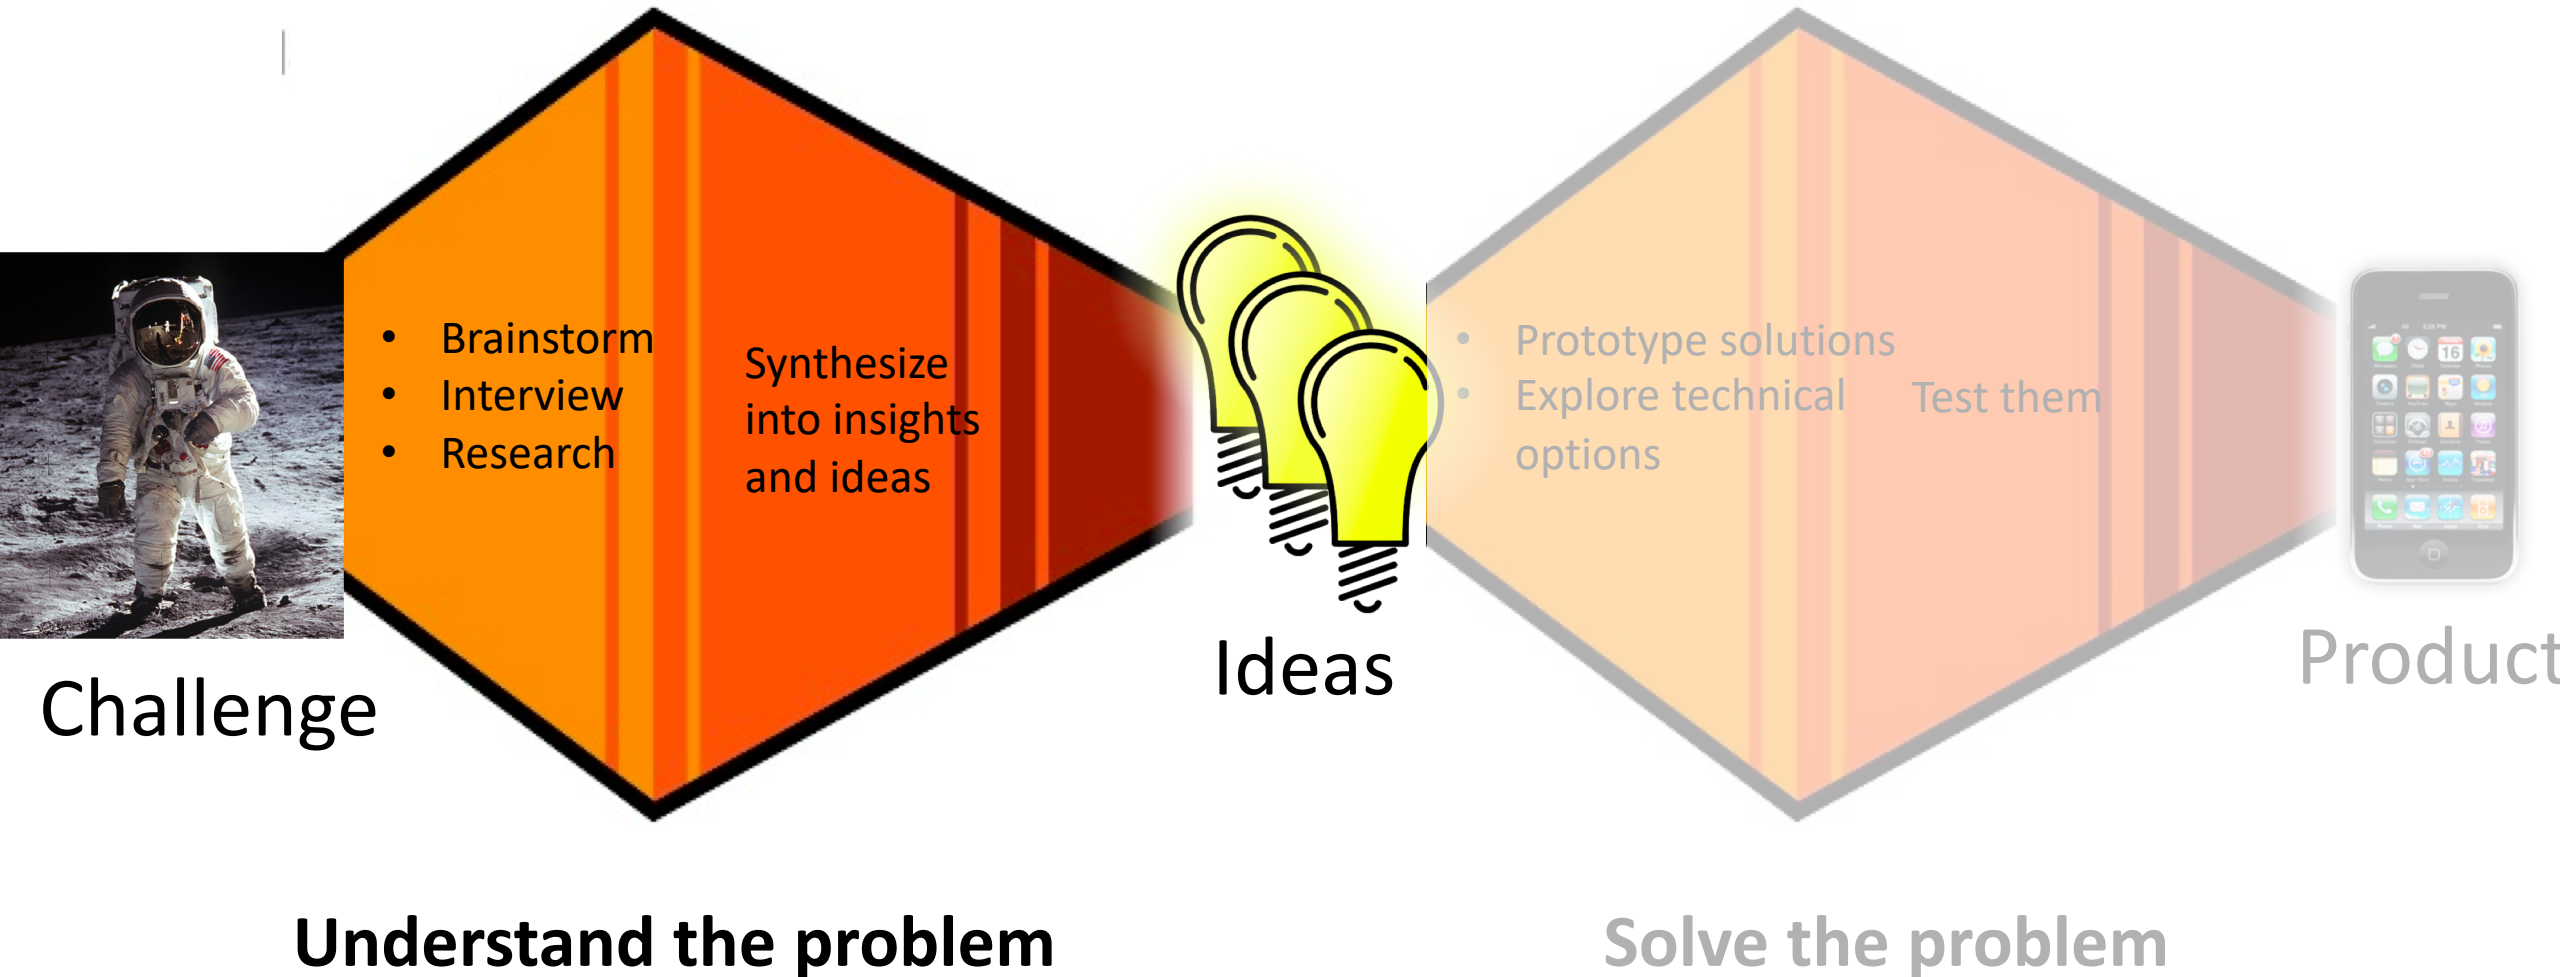

Don't assume the problem.

Research it.

The Double Diamond Process

Phase 1: Understand the Problem

Brainstorm to understand the space of possibilities. What problems might I solve?

- Cooking
 - Is meat cooked?
 - How prepare sashimi
 - How to fold dumplings!
 - Vegan meat substitutes
 - How to tell if fruit is fresh
- Programming
 - Regular Expressions
 - How to rebase
 - Latex functions
 - GET vs. POST requests in AJAX
- Basketball
 - What's a pick and roll
 - How to shoot a free throw
 - Roles of positions
 - What does the GM do?

Phase 1: Understand the problem

Talk to Users

If you ask “What are your problems?” you get things like this.

I hate homework

I hate taxes

I hate speaking up in class

I hate eating vegetables

I hate my cell phone carrier

These answers doesn't provide us with the details we need to understand the problem.

To find insights and opportunities to help users,
we need to dig into the details of their experience.

I hate speaking up
in class

What's the experience of
speaking up in class?

Step 1.

Find a real person who has done this recently.

Caroline – a student in User Interface design who is shy, but is forced to participate in class and fill out a form after class to record her participation

Step 2.

Ask them about a **specific time** they did it.

When was the last time you spoke up in class?

- What did you say?
- Why did you decide to speak up then?
- What did it feel like. Easy? Hard? Scary?
- What happened after you spoke up?
- What did you think/feel/say/do?
- Then what?

Don't ask broad questions like "why don't you like speaking up in class?"

People are better at accurately recalling a specific incident and reasoning about it.

Student answers to: “Tell me about the last time you participated in class?”

I’m worried my accent won’t be understood

I only saw something if I’m 100% sure of the answer. I don’t like to guess

I’m so nervous about participating that I don’t pay attention

It takes me a few seconds to think of something, and by then you’ve called on someone in the front row.

I always forget to fill out the participation form.

I always forget to fill out the participation form.

I always forget to fill out the participation form.

I always forget to fill out the participation form.

I always forget to fill out the participation form.

But why is filling the form so hard????

Fill out participation now!

Columbia University

User Interface Design

COMS 4170 · Spring 2020

Home Grading Syllabus **Piazza**

9	MARCH 23 No Class	MARCH 25 No Class	MARCH 27 Participation Form
---	----------------------	----------------------	--

There is other stuff to check on my phone that I get sucked into.

I'm running to my next class, and my mind switches tasks

I need a computer to fill it out because I have to be logged in.

I didn't know there was a deadline to fill them out by!!!!

I fill it out after I go home

I remind you right after class.
Don't you pull out your phone after class anyway???

Can't I just put it on the homework.

Step 5.

Identify insights, opportunities and metrics.

- Have people just write their participation on the homework.

Homework

Individual. User Interview: For one of the domains you are considering teaching, find a target user and interview them for ~10-20 minutes.

- Get a sense of **what they already know about the topic**,
 - What's hard about it?
 - What might they might be interesting in learning?
- Then, ask them about a **really good learning experience** they had in the past.
- Ask them to describe the **experience**
- Reflect on **what they liked**.
- **Why** did they like it?

Phase 1: Understand the problem

Competitor Analysis

Near Competitors (other ways of teaching 4170)

Design

The dt+UX course focuses on bringing design thinking, processes, and tools to user experience design. From sketching to hands-on studio sessions, students in the dt+UX course learn the importance of making many design artifacts before narrowing down the space to focus on a final design.

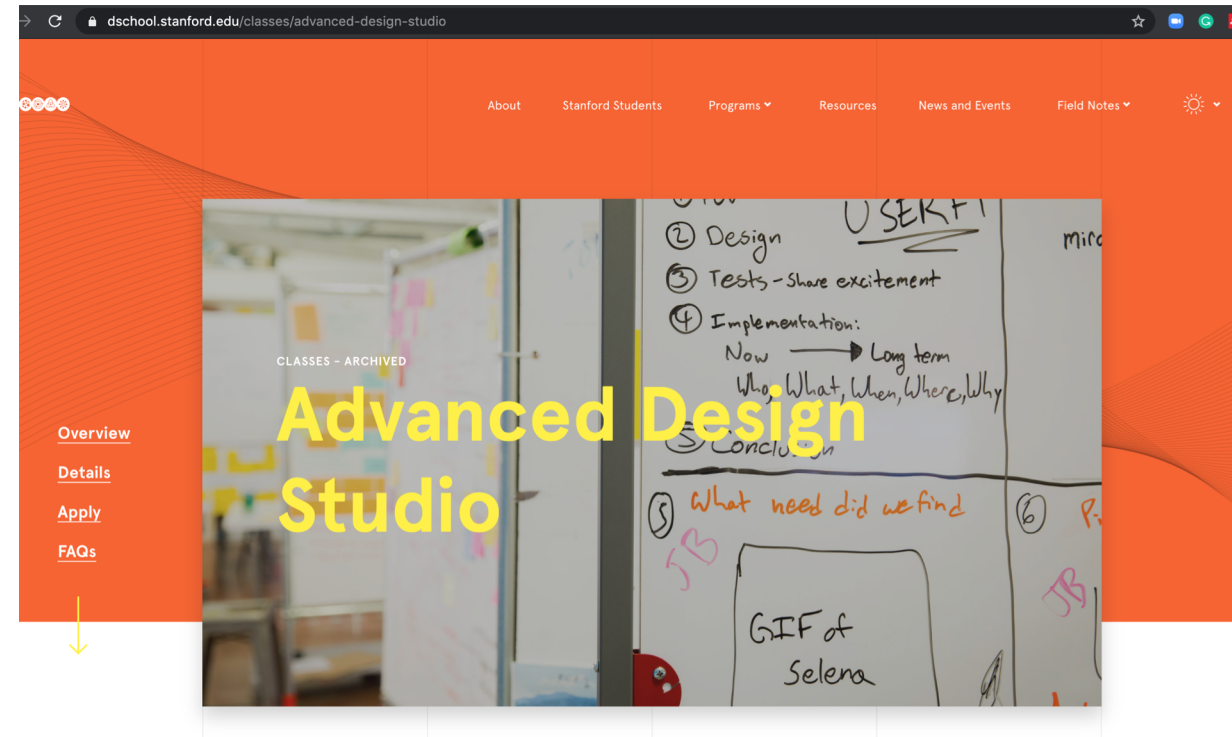

Prototype

Prototyping is the key tool to move ideas out of a designer's head and put them into a tangible form to evaluate for inclusion in the next design iteration. Students in the dt+UX course produce prototypes that range from paper sketches to concept videos to wireframes to code running on the target platform.

Evaluate

Evaluation is how we choose whether a design or feature moves forward in our process or needs to be discarded or revised. Students in the dt+UX course learn and use evaluation techniques that run the gamut from critique to expert evaluation to usability testing in the lab or field to remote usability testing.

Far competitors (other teaching tools)

Homework

1. Individual. Competitor Analysis: What are 5 existing products that allow you to learn with interactions, and feedback.

1. What topic does it teach?

2. Who is the target?

3. What media does it use to help people learn?

4. What is a major way it uses interaction to help people learn

5. What are **3 things you like** about it?

6. What are **3 things that could be better?**

Competitors for teaching people to differentiate impressionism from post-impressionism

ii.

< EUROPE: 19TH CENTURY

Impressionism

These artists broke new ground with sketchy, light-filled canvases shown in independent exhibitions.

c. 1874 - 1886

Beginner's guide

These artists each sought their own solutions for the depiction of modern life. Can we even call Impressionism a unified style?

Impressionism, an introduction

How the Impressionists got their name
Impressionist pictorial space

Impressionist color

Looking east: how Japan inspired Monet, Van Gogh and other Western artists

videos + essays

The Impressionists painted city parks and city streets, train stations and ballet rehearsals, cafés and lily ponds.

Impressionist color

Blue snow and violet-tinted flesh—the Impressionists radically changed our expectation of color.

Impressionist pictorial space

The surprising pictorial effects of modern art may seem at first like errors, but they are quite intentional!

What does "Impressionism" mean?

Impressionist paintings—once considered sloppy and unfinished—draw huge crowds to museums today.

A summer day in Paris: Berthe Morisot's *Hunting Butterflies*

The subject takes control over the outdoor setting, expressing her independence in spite of limitations.

How to recognize Monet: *The Basin at Argenteuil*

In the suburbs, Parisians escaped the pressures of modern life. Monet painted their sun-drenched pleasures.

How to recognize Renoir: *The Swing at Argenteuil*

Renoir wanted to forget everything he knew about how to paint so that he could render light as it really is.

- iii. I like how the site lists paintings and explains the aspects that make it impressionist or post-impressionist, not just the general biography/context of the work, which really helps when trying to distinguish between styles. I also like the layout and how there key points and example paintings are all in one place for each movement, making the learning easier to navigate.

Phase 1: Understand the problem

Academic Research

Read books, papers, theories, scientific evidence to get insights into the problem.

Educational insight #1:

Reading textbooks is boring. Nobody learns from that. People learn by practicing - from doing something and getting feedback.

- Design and build a **web** application
- That allows a user to **interact** with media
- Within a **domain of your choosing**
- To help a user learn an introductory topic **interactively**
- And help them assess themselves with a **quiz**.
- And keep learning through **feedback** from the quiz.
- In under **10 minutes** total

Educational insight #2:

Students are terrible at assessing their learning. They need tools to assess themselves.

- Design and build a **web** application
- That allows a user to **interact** with media
- Within a **domain of your choosing**
- To help a user learn an introductory topic **interactively**
- And help them assess themselves with a **quiz**.
- And keep learning through **feedback** from the quiz.
- In under **10 minutes** total

Insights and opportunities can come from anywhere. Just observe and ask why?

The screenshot shows the Columbia College website. The header includes the college logo and navigation links. The main content area is titled "The Core Curriculum" and features a sidebar with a list of requirements and a main image of books. Below the image is a paragraph of text.

COLUMBIA COLLEGE

 - About the Core Curriculum
 - Visiting Professorship

The Core Curriculum is the set of common courses required of all undergraduates and considered the necessary general education for students, irrespective of their choice in major. The communal learning—with all students encountering the same texts and issues at the same time—and the critical dialogue experienced in small seminars are the distinctive features of the Core. Return in the early

In academic studies

Why didn't Aristotle try any of his theories like Galileo did?

During everyday activities

How do baristas manage to serve all these assholes?

In the things you find fun

How does Popovich always construct a playoff team and the Knicks can't win shit?

Everyday activity: changing the thermostat?

Why do I have to set this stupid thing constantly?

Real ideas behind applications you use.

Problem

Idea

Teaching fractions

Workbooks suck. I'm going to show people how I think through them problem.

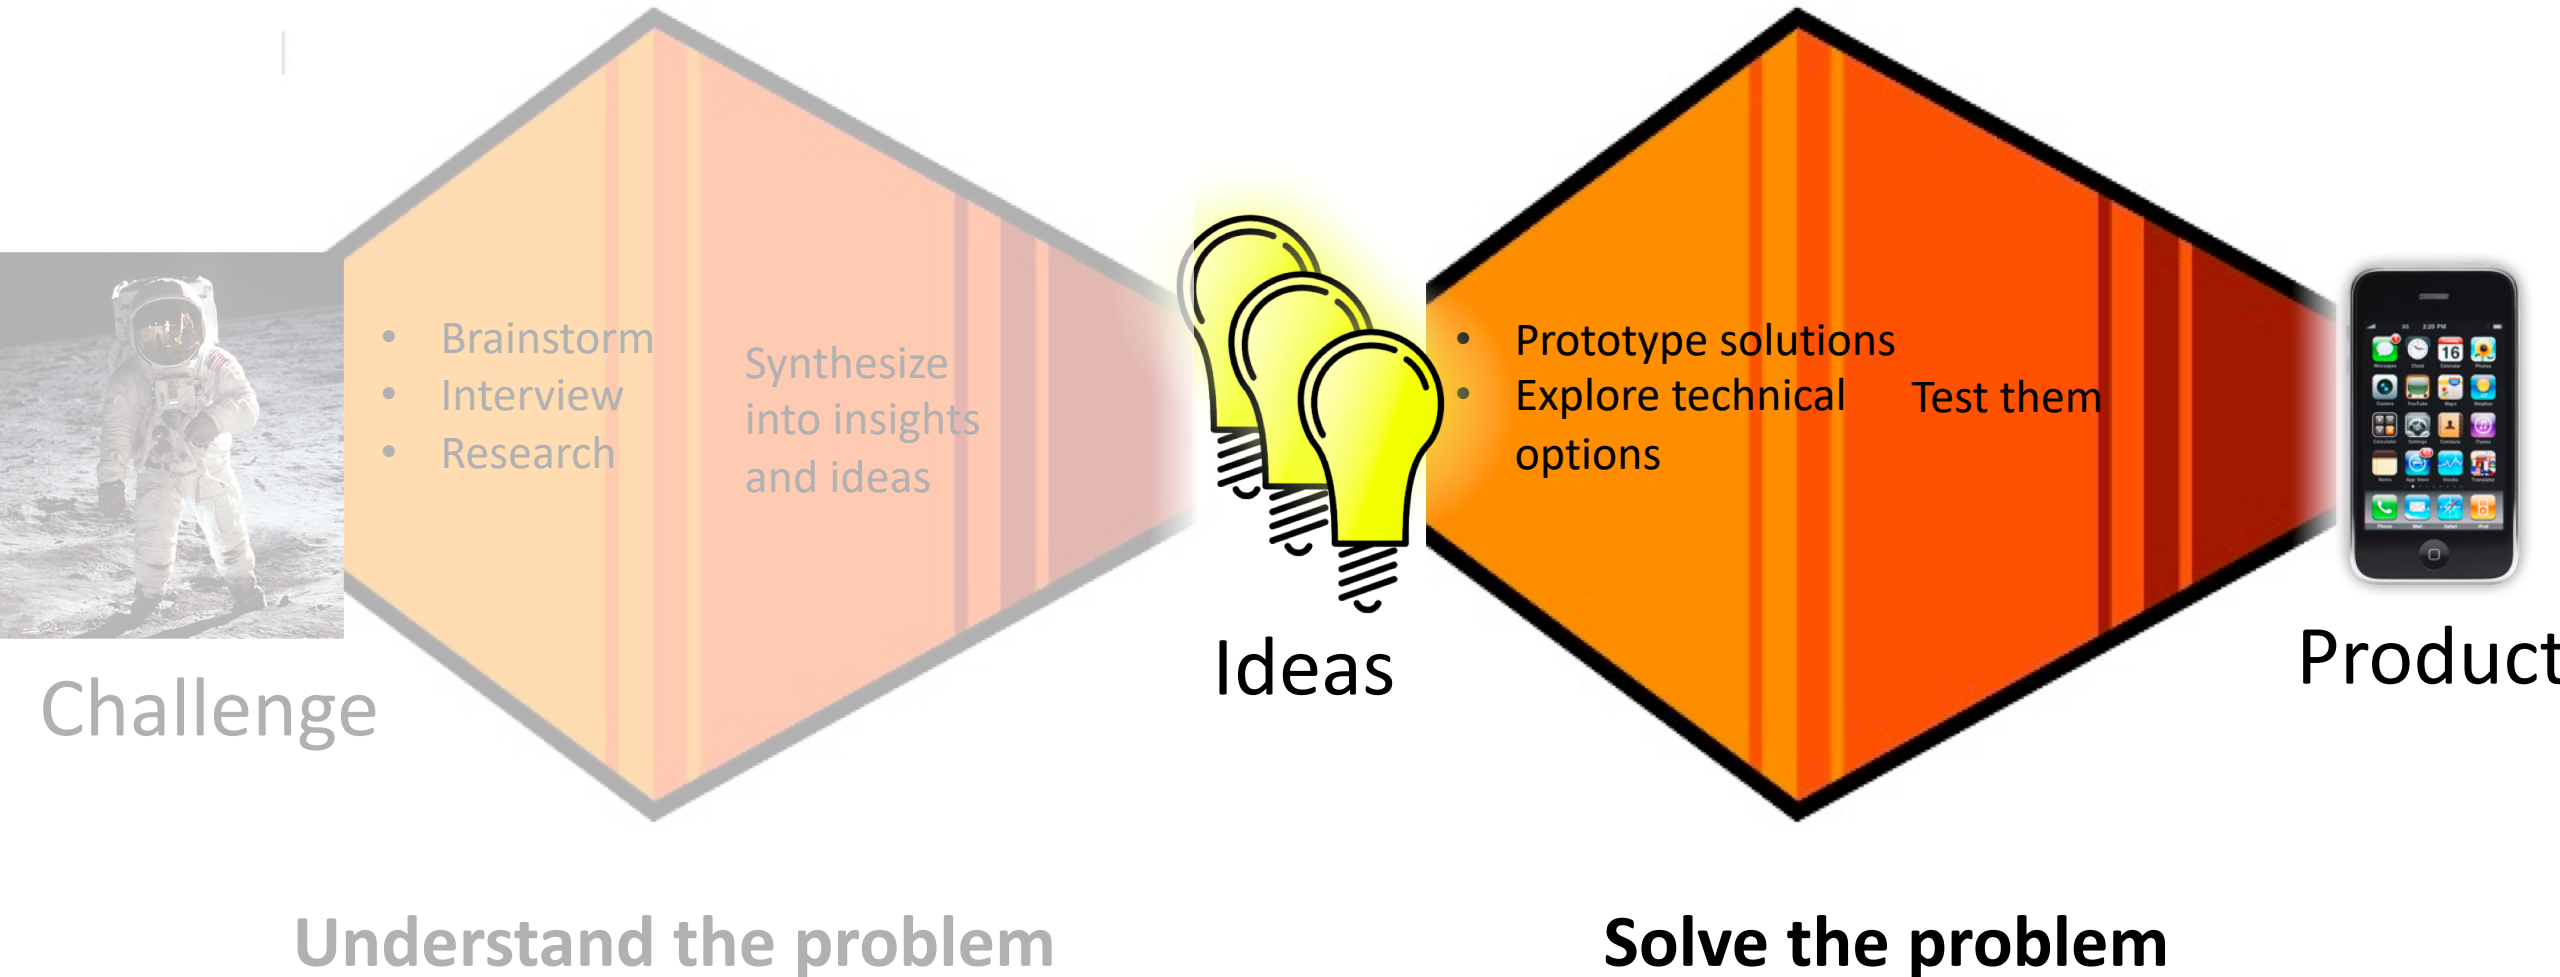

Making yearbooks

Photoshop is HARD, and sharing resources is annoying. Maybe some online templates can make this easier.

Social network for photos.

People take crappy photos and are not too eager to share them. What if filters made every photo beautiful?

Phase 2: Solve the Problem

Design isn't linear. **It's iterative.**

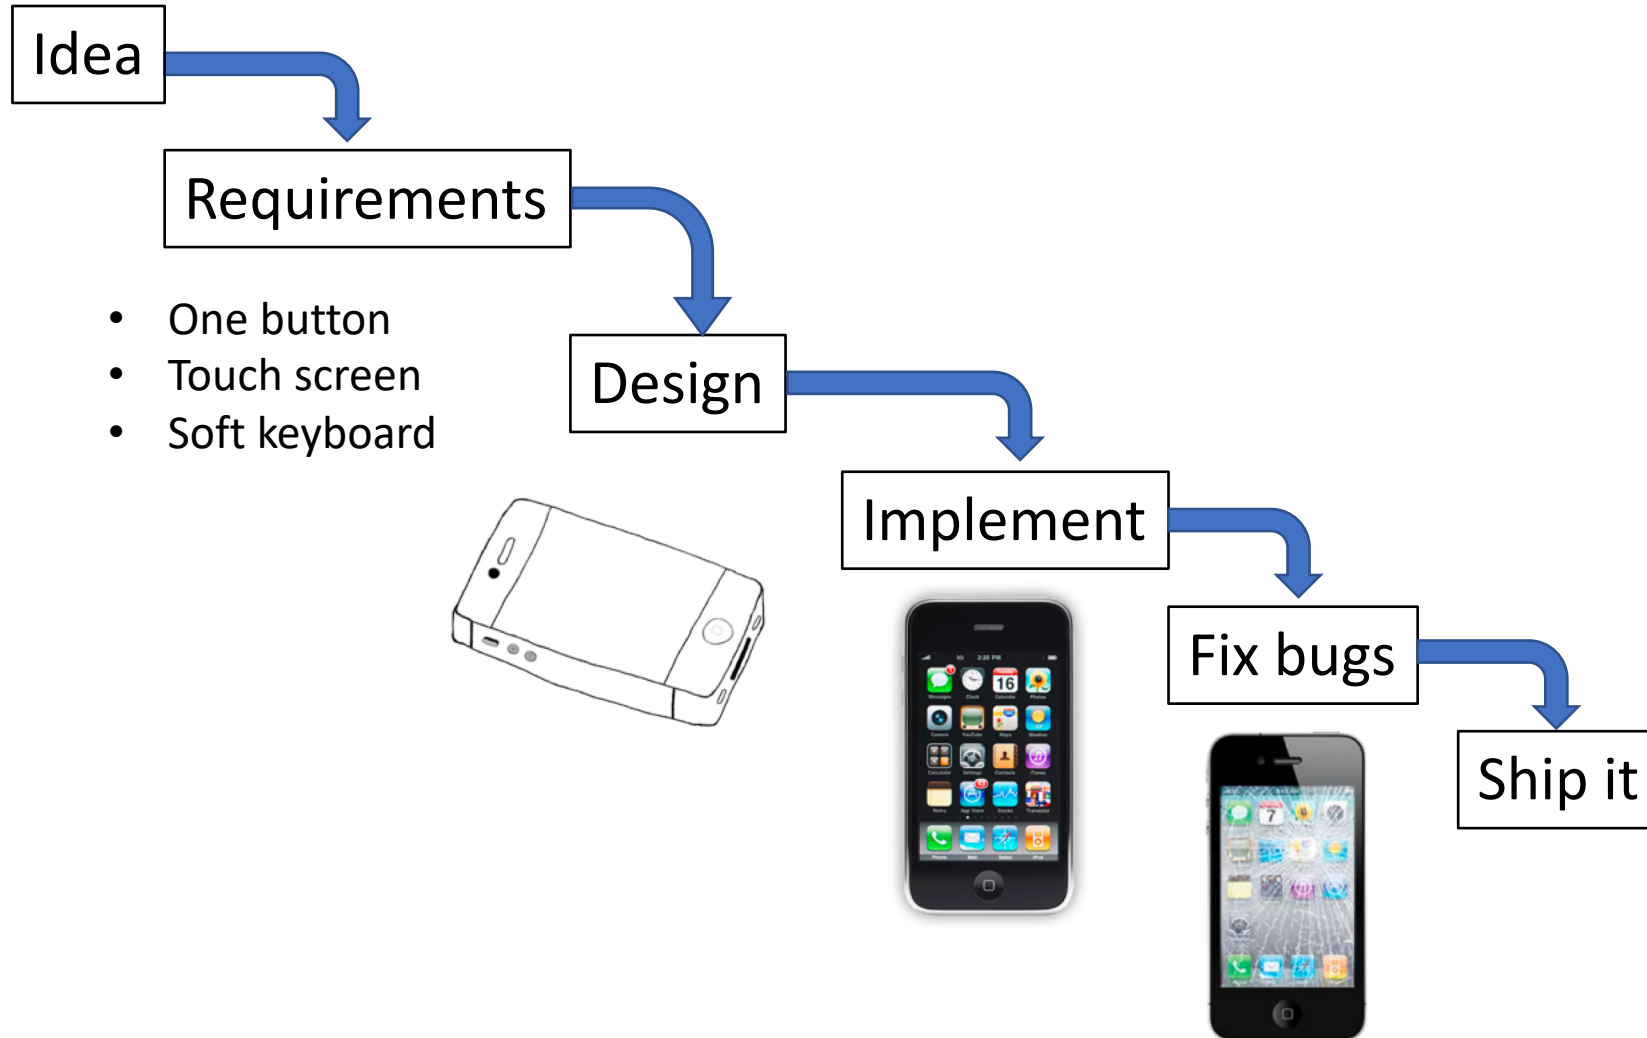

People expect implementation to be linear

Instead, implementation is iterative.

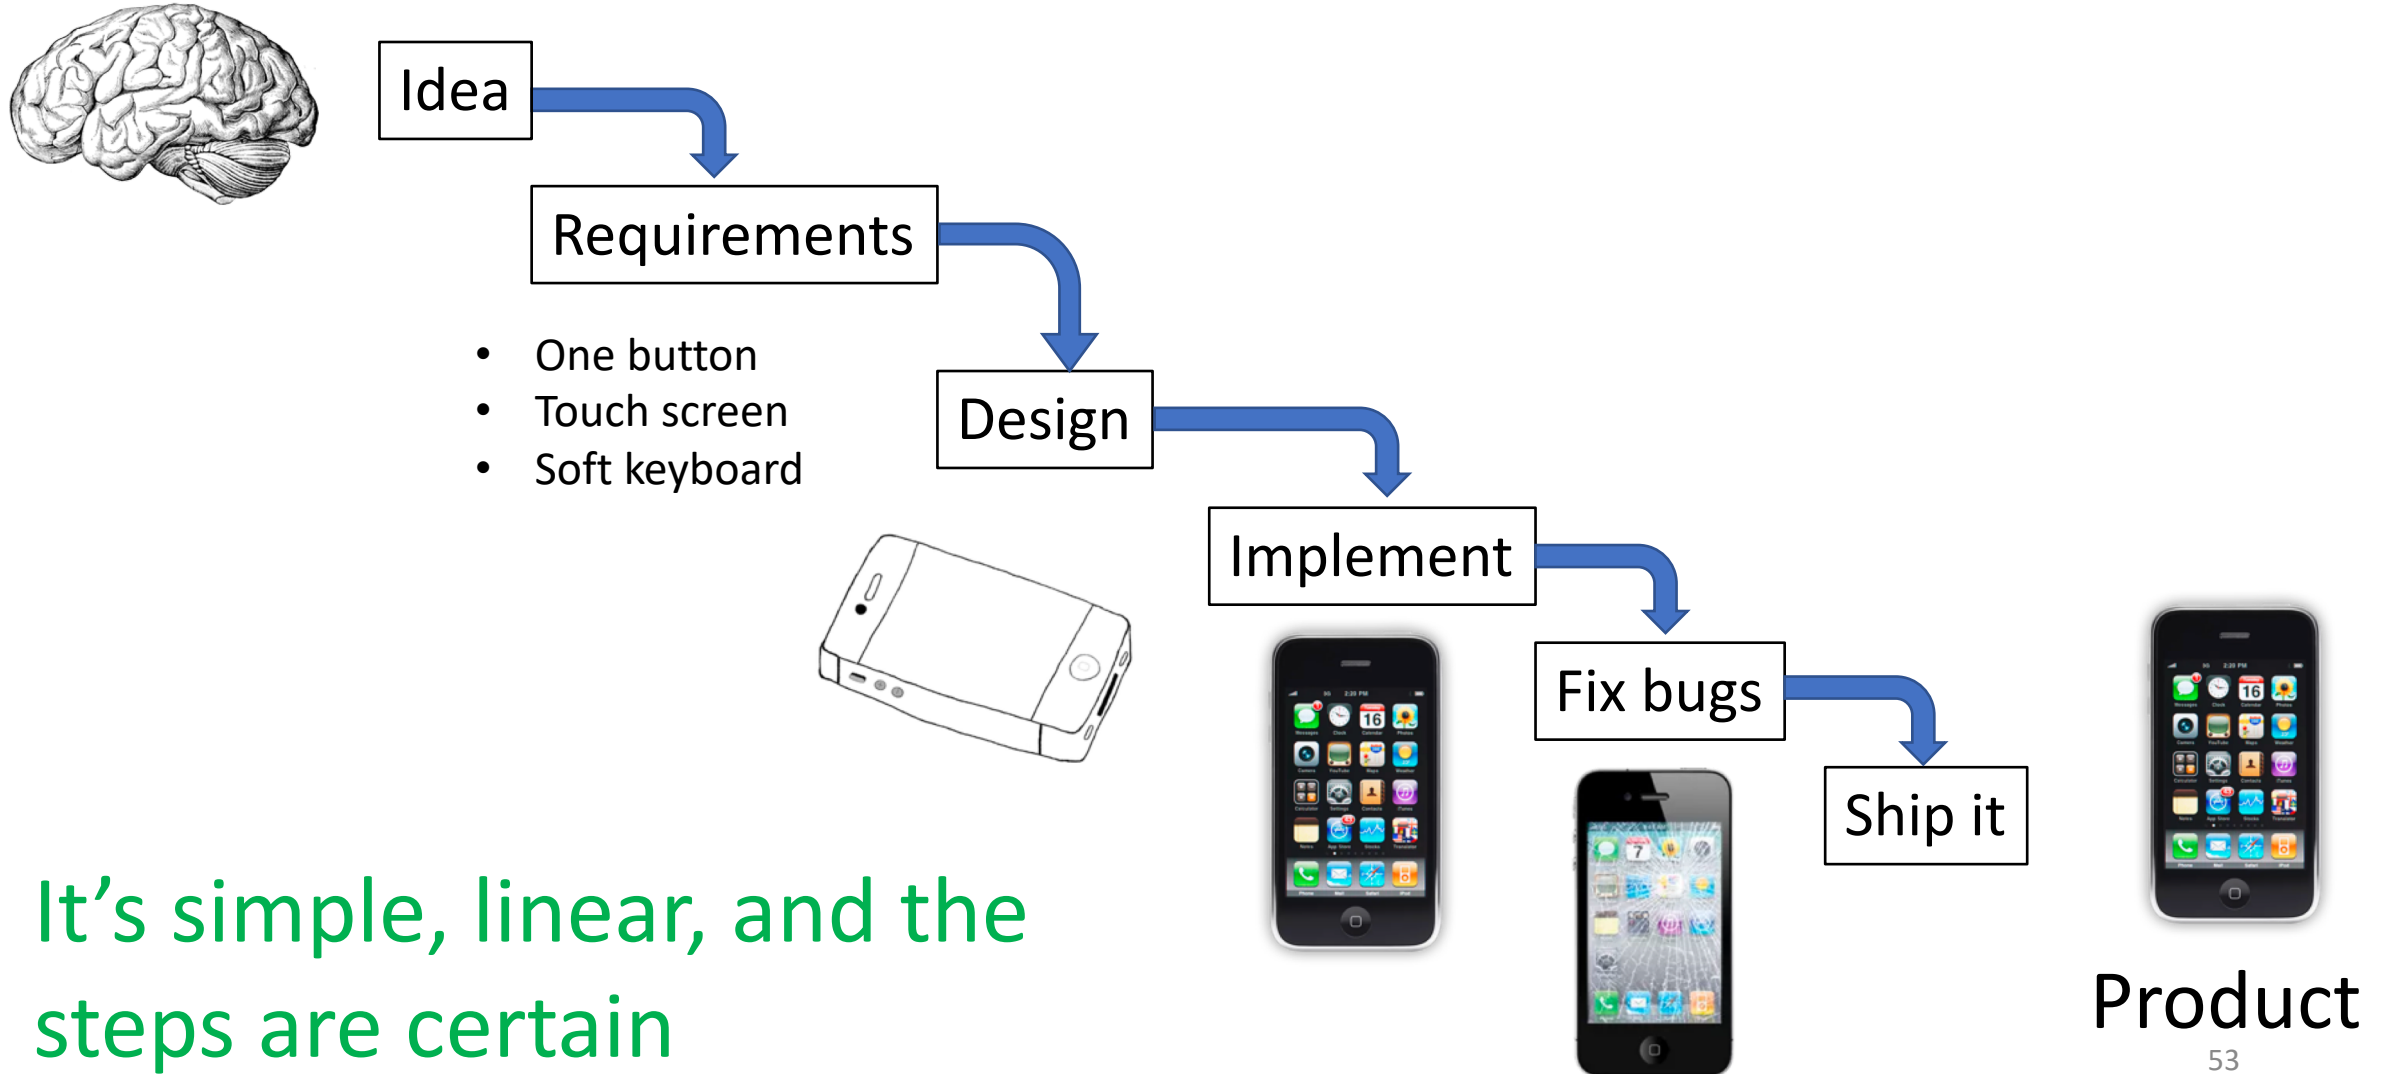

The Waterfall Model of software design

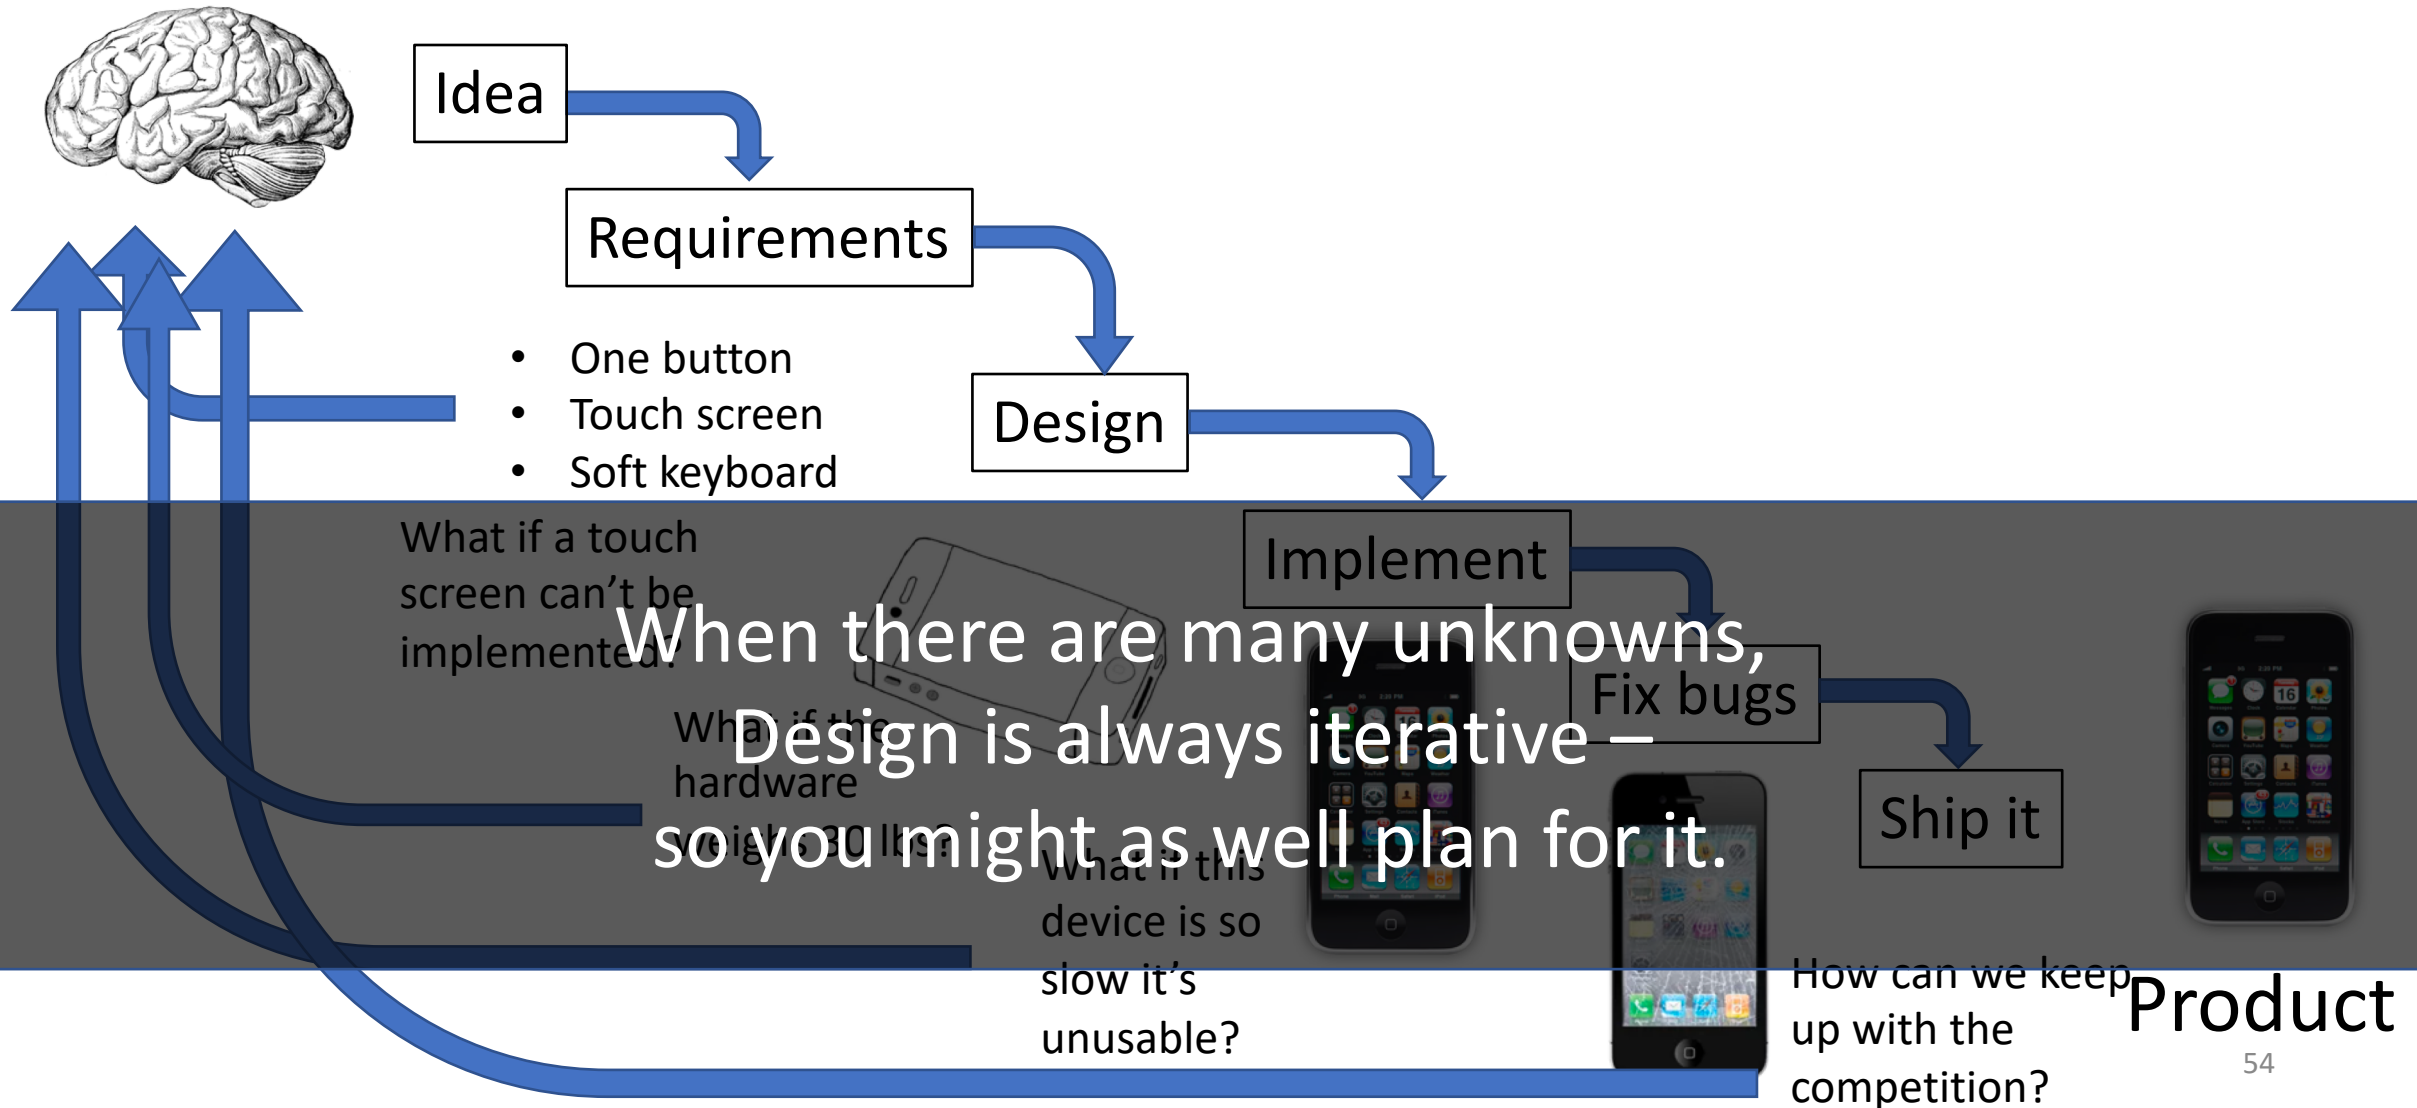

Product

The Waterfall Model: What's good about it?

The Waterfall Model: **What could go wrong?**

Iterative Design

Idea

Product

Iterative Design origins: Spiral Model of software engineering (Barry Boehm, 1988)

Every iteration should experiment with the next biggest risk.

How to achieve the perfect gradient on app icons?

Does touch work?

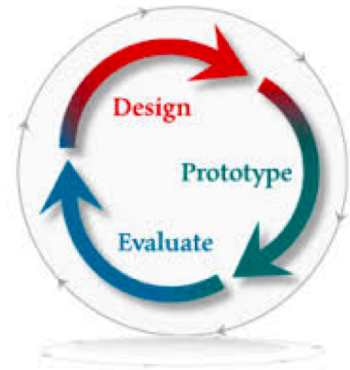

All new concepts are risks.
They must all be prototyped.

To minimize risk on novel designs, Use iteration on each risky aspect of the design

Idea

Touch screen

Soft keyboard

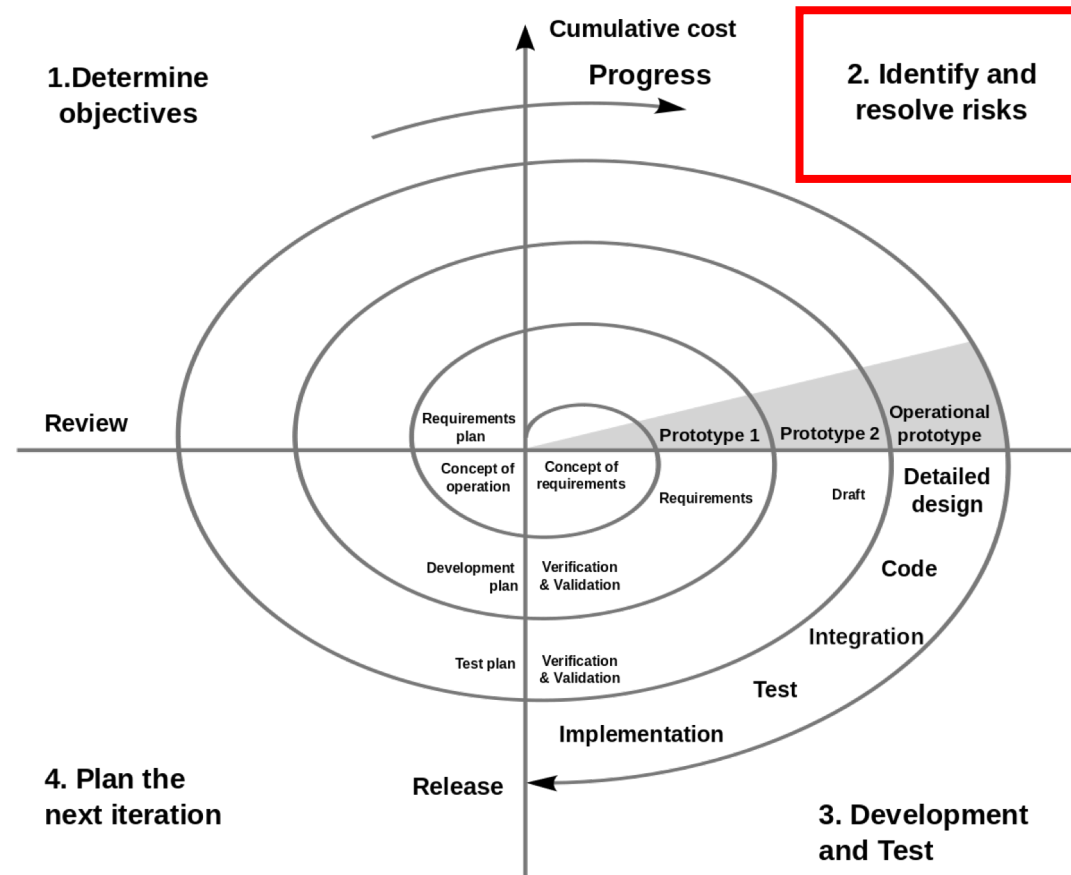

One button

Product

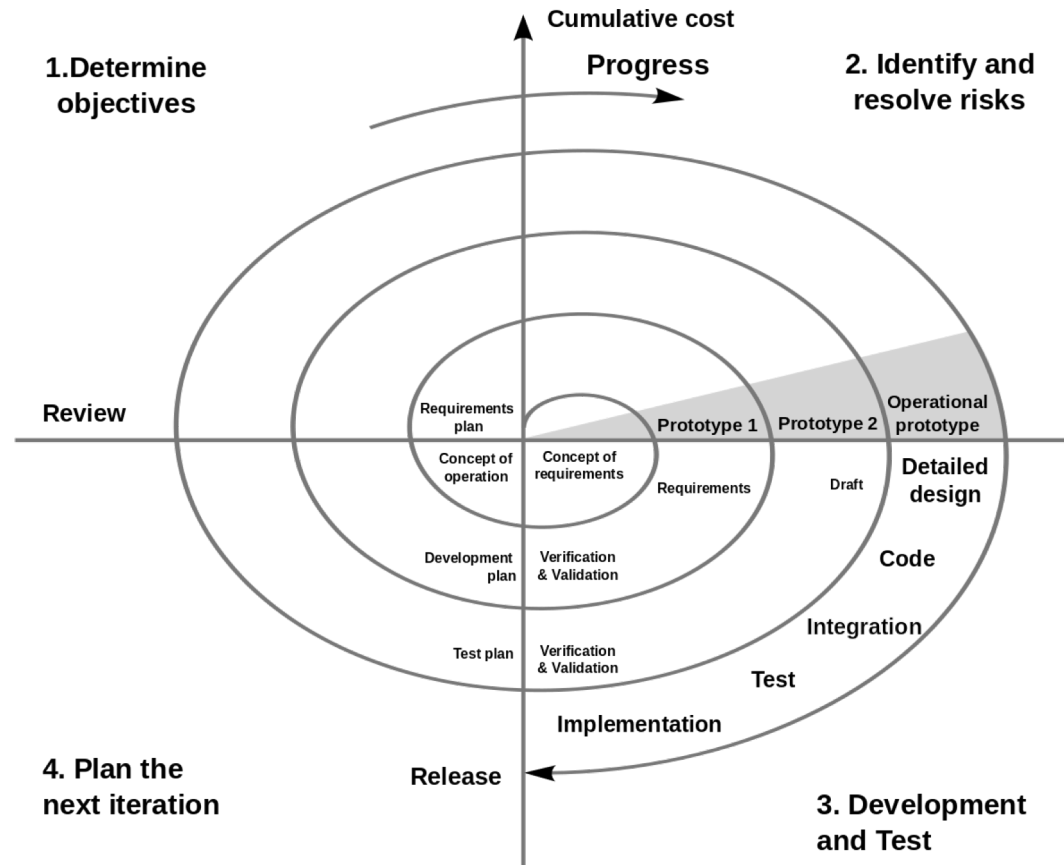

Iterative Design is good because it minimizes risk

Iterative Design: **what's hard about it?**

Idea

Product

The steps aren't certain from the start.

Low-Fidelity Prototypes

Iterative Design is good because it minimizes risk

The first iteration should be as low-fidelity as possible

1. Determine objectives

2. Identify and resolve risks

4. Plan the next iteration

3. Development and Test

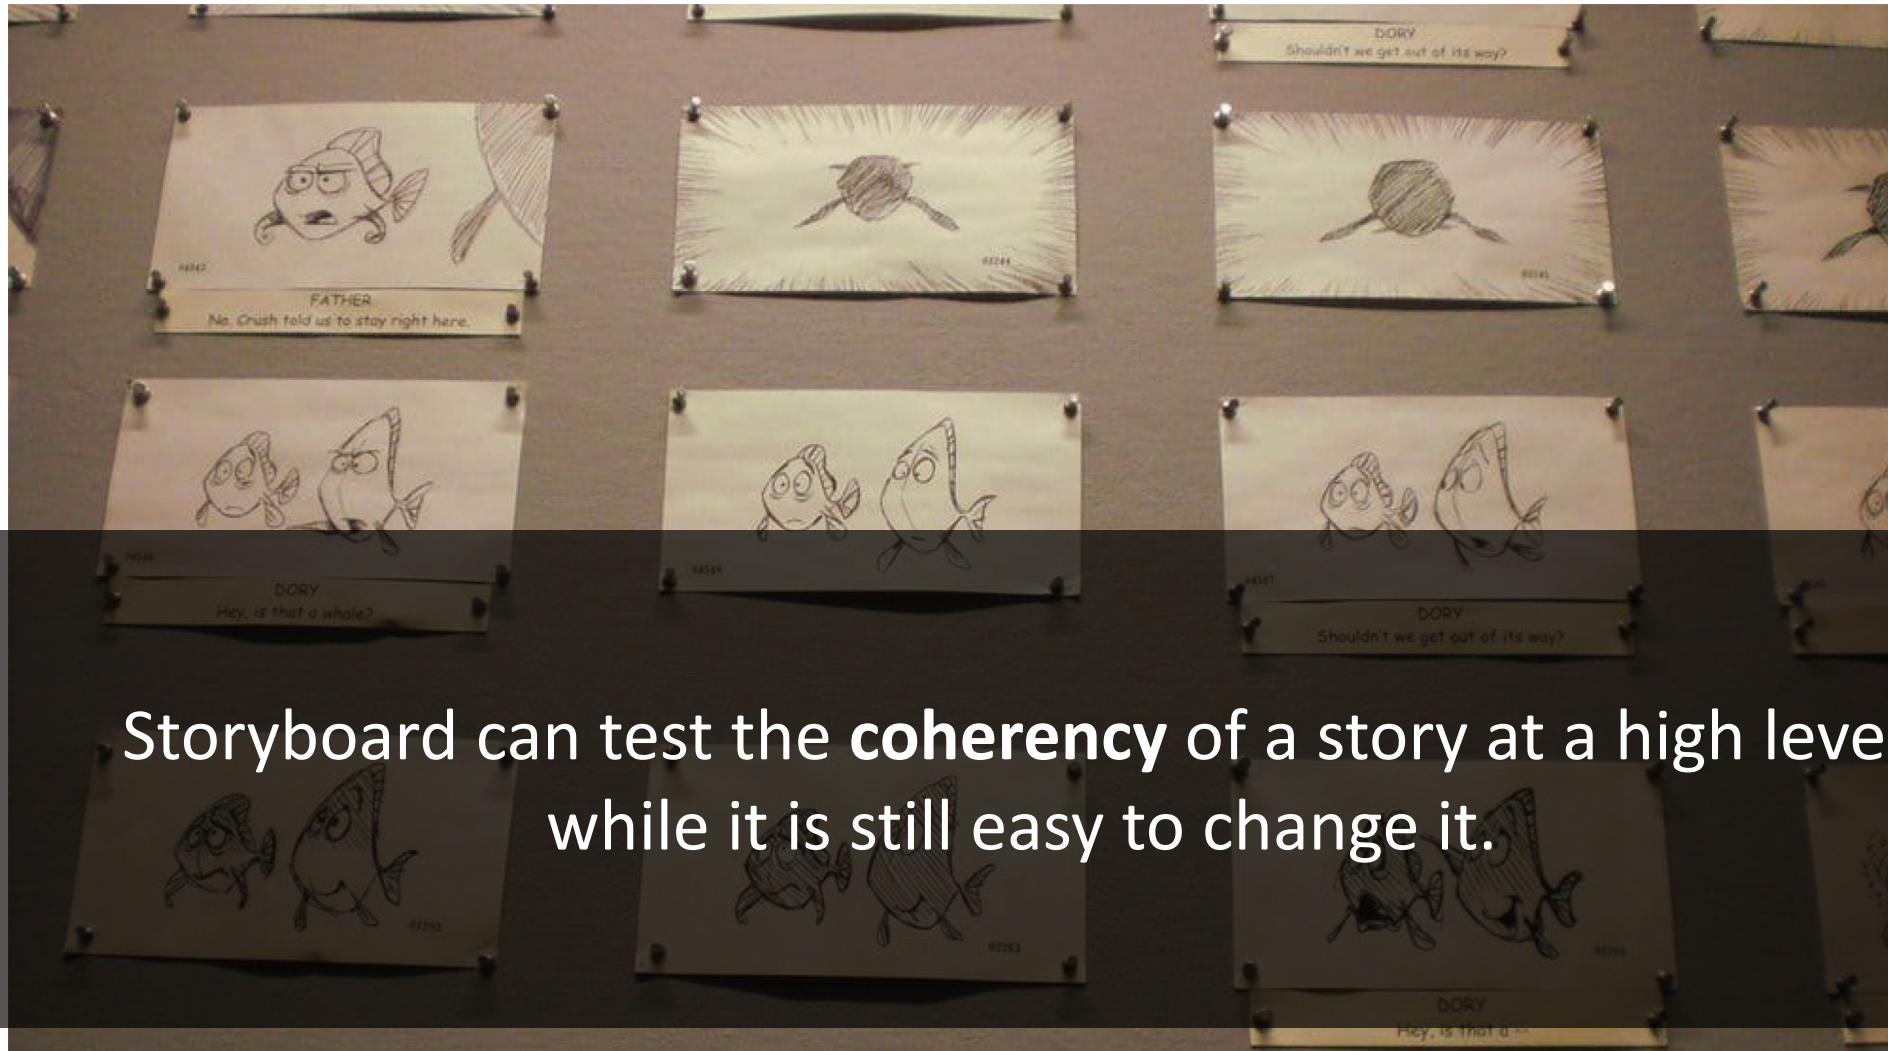

Start with a paper prototype. Why?

Pixar makes detailed and beautiful films

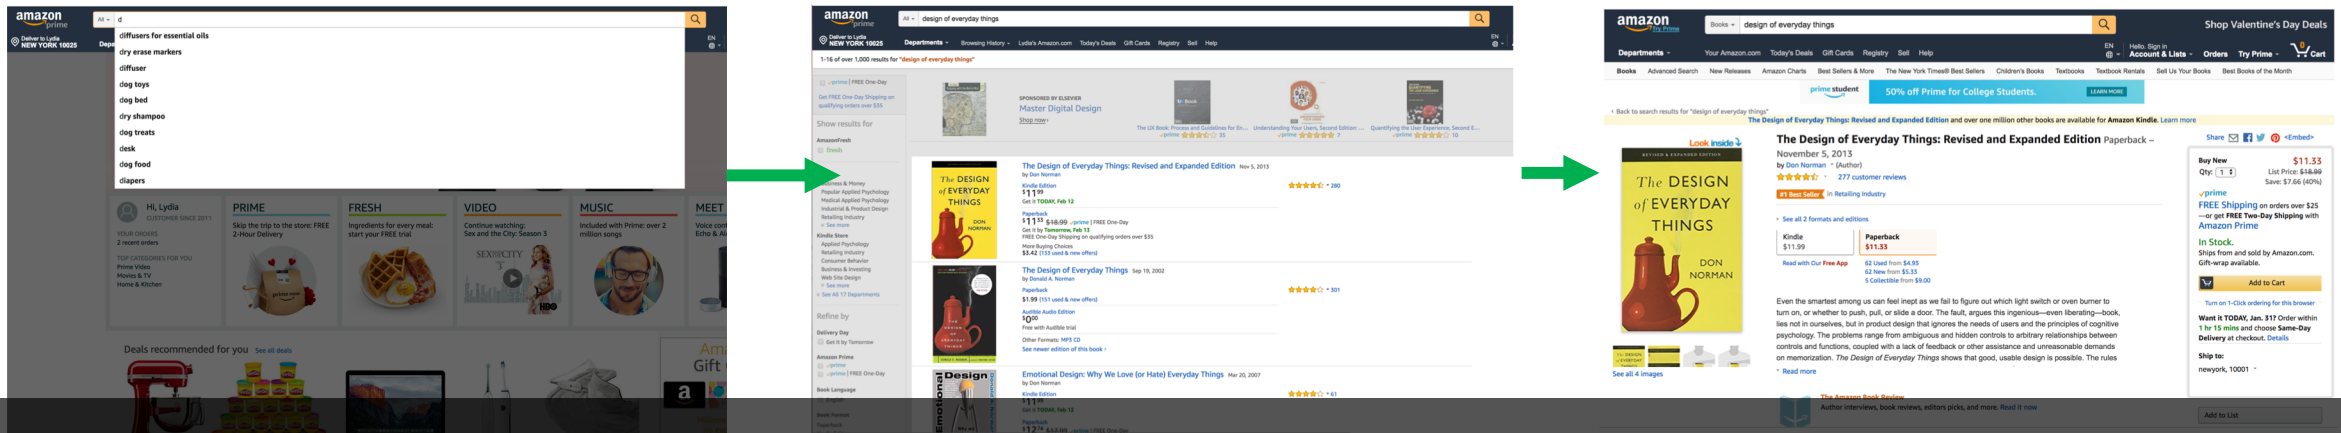

They always start with a storyboard. Why?

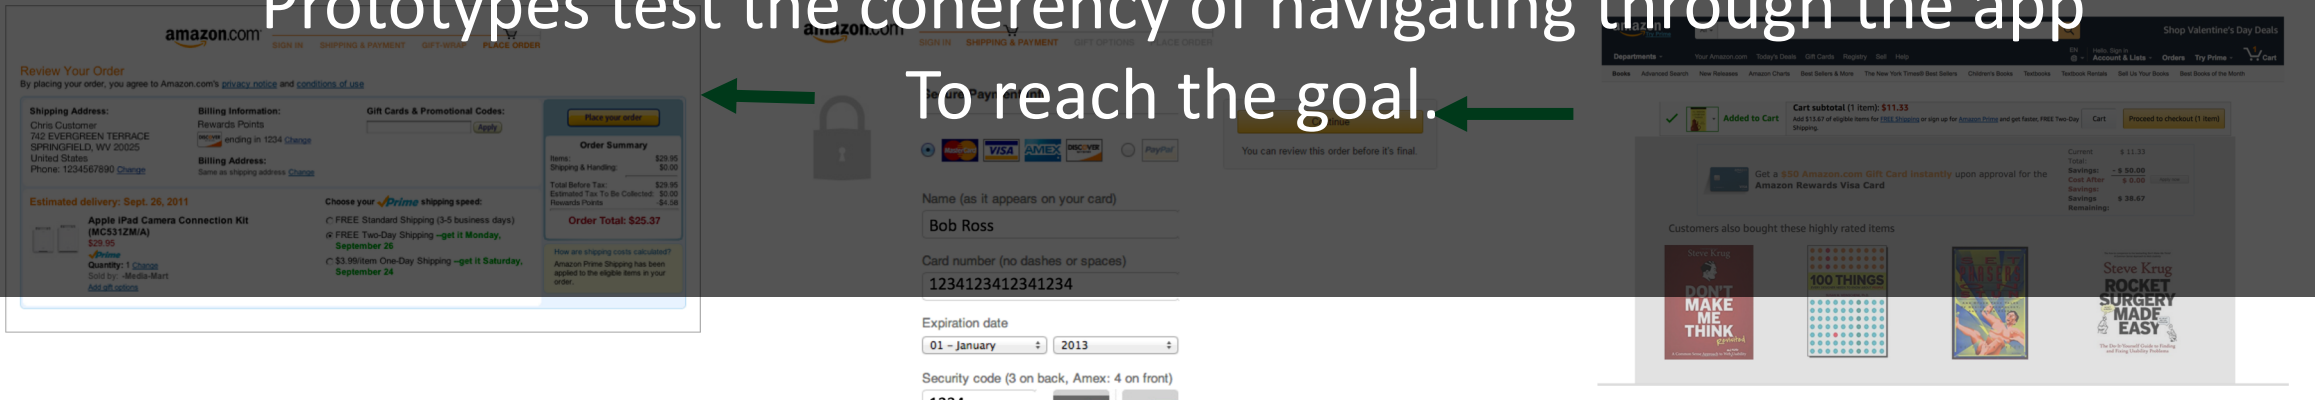

Storyboard can test the **coherency** of a story at a high level, while it is still easy to change it.

For complex goals, break the task into states, options, and transitions to new states.

Prototypes test the coherency of navigating through the app To reach the goal.

HOME POLICE AT YOUR DOOR PULLED OVER STOPPED IN PUBLIC ARRESTED TEST

Police are at your door

Next section

Your Rights

- To remain silent
 - This means xyz
- To see a warrant
 - This means you do not have to let them in until you see a warrant

What are warrants?

Tips to reduce risk to yourself

DO

- Ask the officer if you can see a warrant and ID
 - Ask the officer to slip the warrant under the door or hold it up to the window so you can read it
- Write down everything officers do if you are searched

DO NOT

- Invite the officer into your house without seeing ID and warrant
- Speak to the officers about anything

- Low-Fi Prototype 1
- YOU AND THE POLICE
- Police are at your door
- Police are at your door
- Pulled over by police
- Strapped by the police in public
- Arrested by police

Summary

What is design?

A method for understanding & solving people's problems

*“Design is a plan for arranging elements
to accomplish a particular purpose.”*

– Charles Eames

Science is a method for understanding the universe

Design is a method for understanding and solving people's problems

Multiply $\frac{3}{4} \cdot \frac{7}{5}$. Simplify your answer and write it as a mixed fraction.

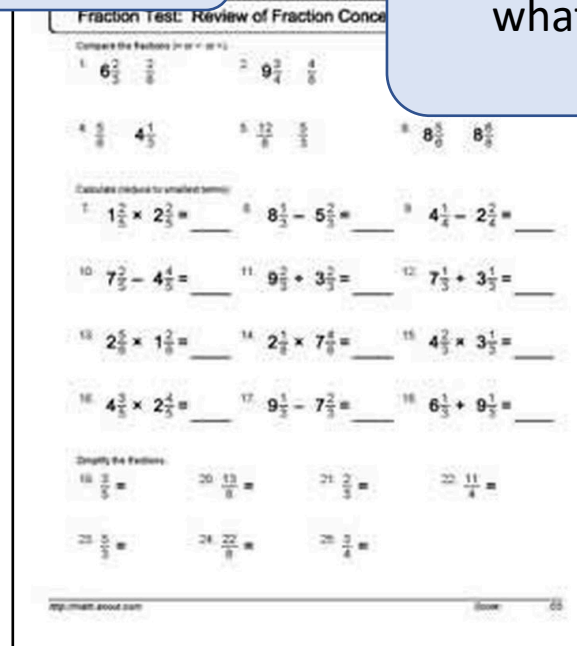

$$1 \frac{3}{4} = \frac{4 \cdot 1 + 3}{4} = \frac{7}{4} \quad \frac{7}{4} \cdot \frac{36}{5}$$
$$7 \frac{1}{5} = \frac{5 \cdot 7 + 1}{5} = \frac{36}{5}$$

Design is a process where you work with users to understand their problems...

What's wrong?

I just don't get what to do.

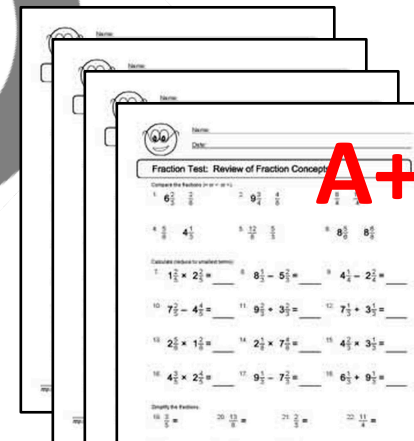

And test solutions with users until it solves the problem.

Rewrite each fraction with a denominator of 10.
