

Final Review

Prof. Lydia Chilton

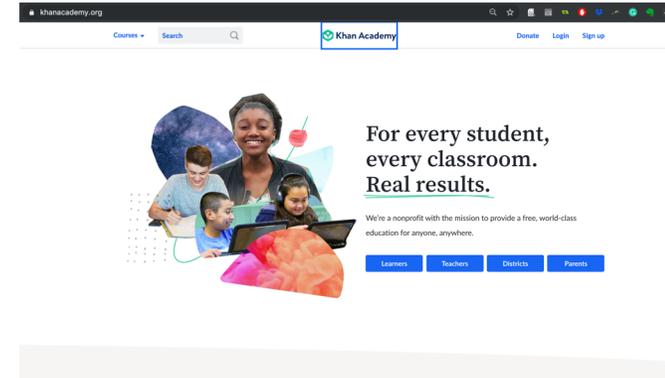

COMS 4170

22 April 2024

The biggest misconception about creativity

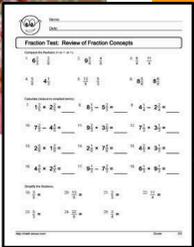

Idea

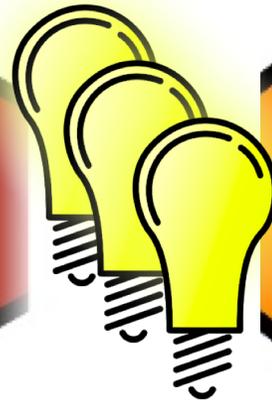

Product

Creativity is a Process

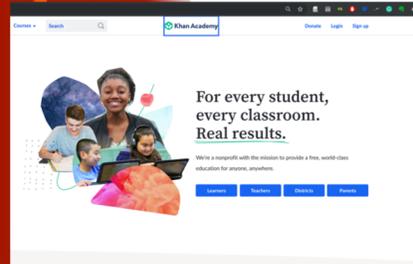

- Brainstorm
- Interview
- Research

Synthesize into insights and ideas

Ideas

- Prototype solutions
- Explore technical options
- Test them

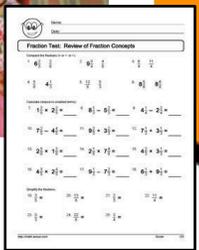

Product

Person with a challenge

Understand the problem

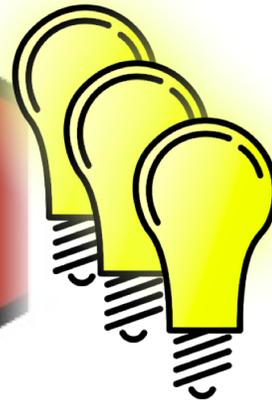

Solve the problem

That process is iterative: Design – Prototype – and Test

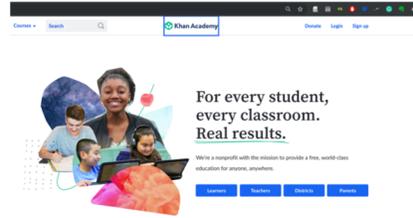

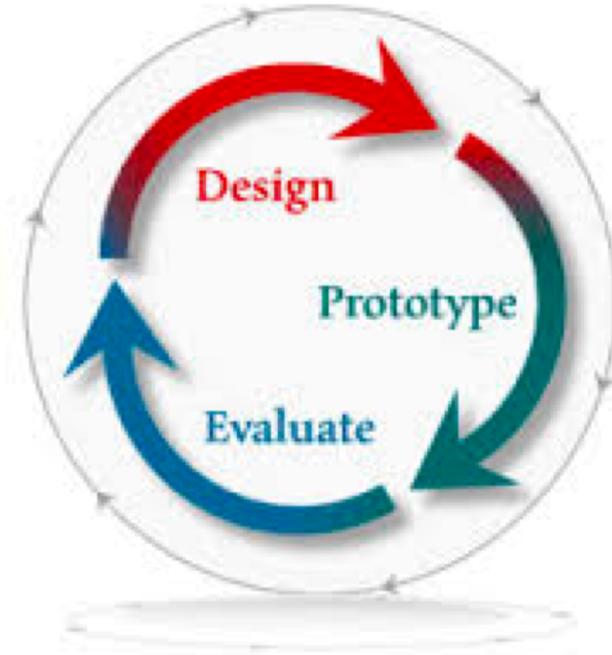

- Brainstorm
- Interview
- Research

Synthesize into insights and ideas

Ideas

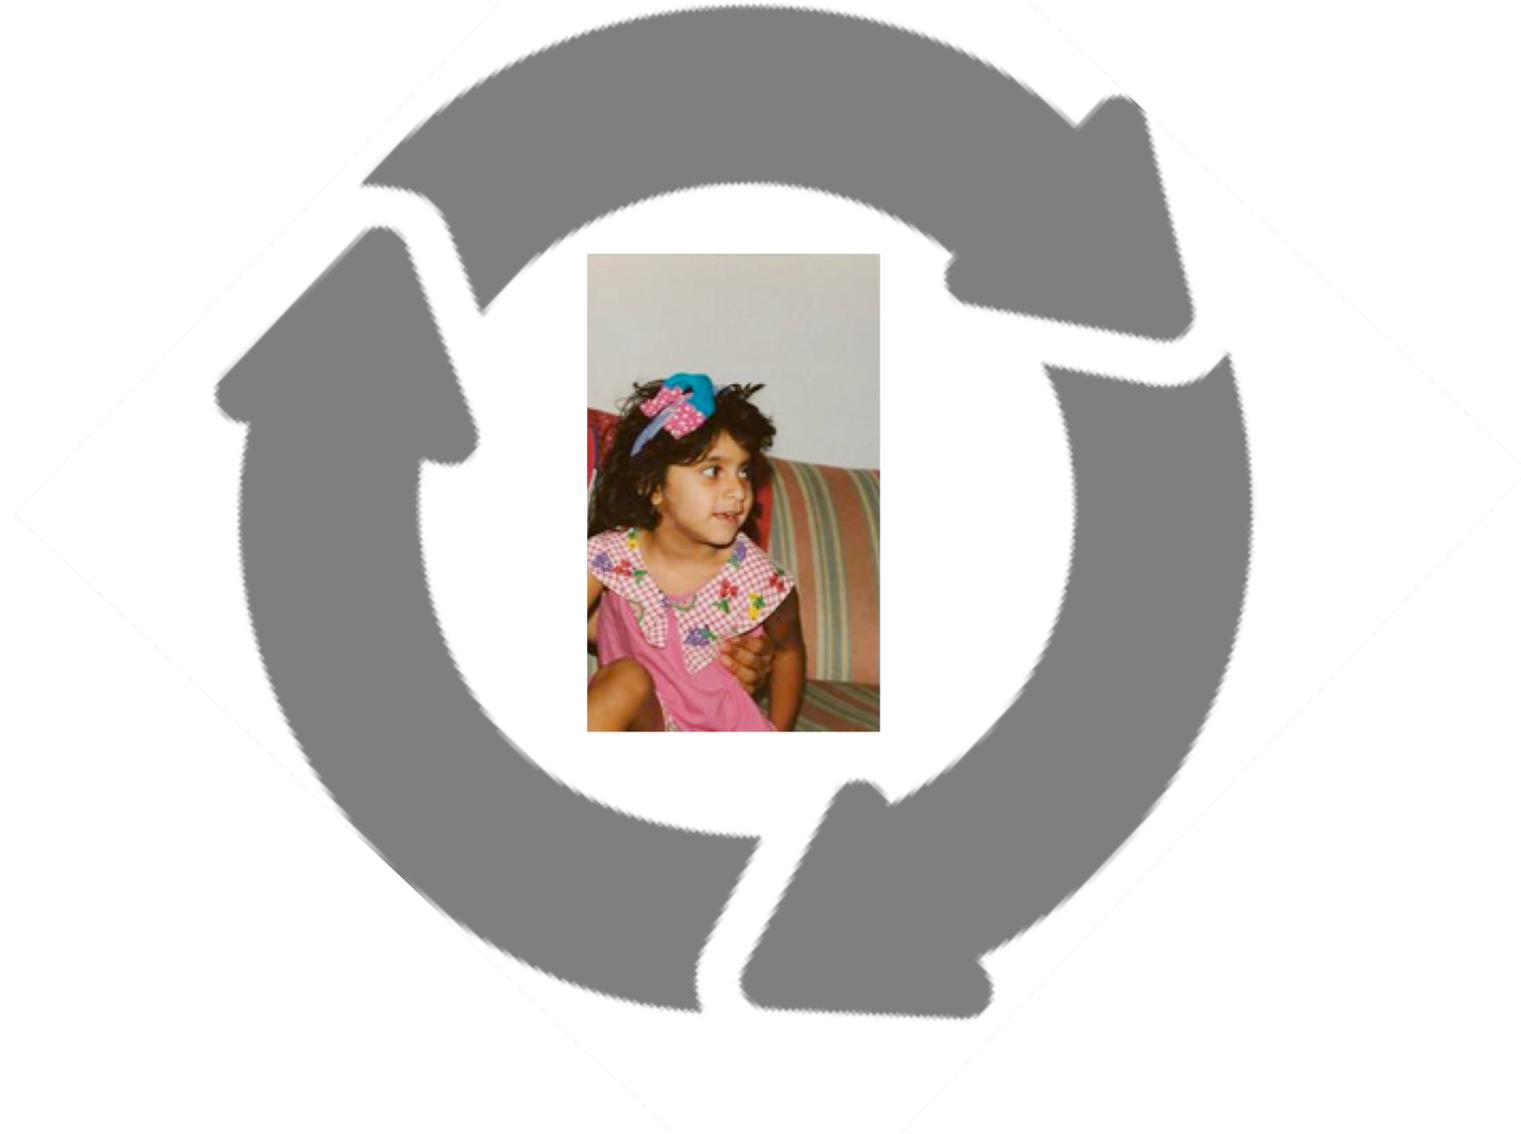

Product

Person with a challenge

Understand the problem

Solve the problem

The **user** is at the center of the process

Final Project:

- Design and build a **web** application
- To help a user learn an introductory topic **interactively**
- Within a **domain of your choosing**
- The interactive experience centers around **media** (image, video, audio..)
- And help them assess their learning with a **quiz**.
- And keep learning through **feedback** from the quiz.
- In under **10 minutes** total

Final Project Deliverable:

A demo video from the user perspective.

- A narrated YouTube video with a simulated user experience.
- “Show don’t tell”
- Let’s see two examples.

The video philosophy is “show don’t tell”

- Don’t explain what your app is (beyond 1 sentence about the goal), just show us.
- We **don’t** want to hear things like:
 - *“We’re democratizing lip reading”* -> just show the app
 - *“We use interactive lessons and quizzes to help you assess your learning”* -> just show the app.
 - *“Learn to lip read in under 10 minutes!”* -> just show the app.
- This is not a pitch deck. If you want to make a pitch deck for your project and submit to YC, I can help you with that after the class is over.

Demo video checklist.

- Then start using the app exactly as you intend a user to. As you go through every screen, think out loud.
 - **Read aloud** everything that a real user would read.
 - **Think aloud** everything a real user would think.
 - **Click** everything a real user would click (and other interactions)
 - **Express the emotions** a real user would feel.
 - **Make mistakes** that a real user would make (on hard questions).
 - You must have at least one point where the user makes a mistake (and recovers from it) in the learning or quiz.
- The demo should last 8-12 minutes. Any more or less, and major deductions will be taken.
- Every team member must turn in their own video with their own inaction and narration from the user perspective.
- Let's see two examples (and evaluate them on the checklist)

Welcome to **Lipreading**, your site for learning to read lips! Use the navbar above or click the button below to learn the how to lipread different sounds. When you're ready, try a test!

[Start With B](#)

Lipreading checklist

- Then start using the app exactly as you intend a user to. As you go through every screen, think out loud.
- ✓ • **Read aloud** everything that a real user would read.
- ✓ • **Think aloud** everything a real user would think.
- ✓ • **Click** everything a real user would click (and other interactions)
- ✓ • **Express the emotions** a real user would feel.
- ✓ • **Make mistakes** that a real user would make (on hard questions).
 - You must have at least one point where the user makes a mistake (and recovers from it) in the learning or quiz.
- ✗ • The demo must last 8-12 minutes.

Only 7 minutes – too fast!

(Post) Impressionism

[Home](#) [Art Movements](#) [Comparison](#) [Quiz](#)

Welcome to [\(Post\) Impressionism](#).

The goal of this site is to help you **distinguish between two major art movements**, Impressionism and Post-Impressionism. Start by exploring each movement's defining features and artwork. After that, take our short quiz to test your knowledge!

Explore the Art
Movements

(Post) Impressionism checklist

- Then start using the app exactly as you intend a user to. As you go through every screen, think out loud.

Skipped reading in
the learning phase

- ✘ • **Read aloud** everything that a real user would read.
- ✔ • **Think aloud** everything a real user would think.
- ✔ • **Click** everything a real user would click (and other interactions)
- ✔ • **Express the emotions** a real user would feel.
- ✔ • **Make mistakes** that a real user would make (on hard questions).
 - You must have at least one point where the user makes a mistake (and recovers from it) in the learning or quiz.
- ✔ • The demo must last 8-12 minutes.

Your video will be graded on two things:

- **Did it meet the project requirements?**
 - Teach a topic interactively and allow users to access themselves with a quiz.
- **Did you iterate based on feedback to make a high quality, user-centered product?**
 - Idea
 - Content Design (stuff from google doc prototypes)
 - Clear navigation
 - No walls of text!
 - Technical Implementation
 - Quality of the interactive elements
 - Graphic Design and Usability

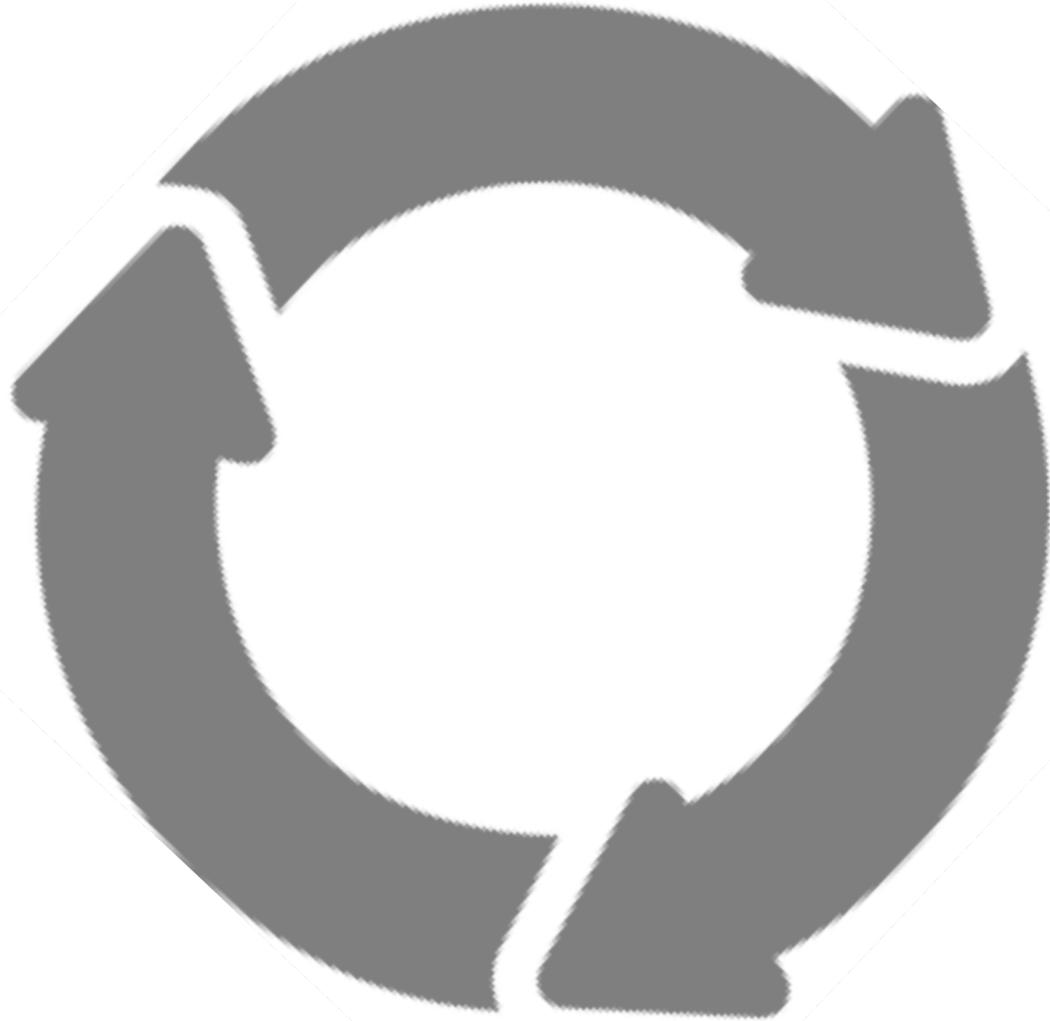

Teamwork with Individual videos.

- Ultimately, you are graded individually based on solely on whether the final deliverable meets the expectations of the project.
- **Everyone turns in their own video with their own narration**
- This means that if you haven't seen one of your teammates since HW9, and they're assigned to do X, you are still responsible for X.
- If you are having trouble reaching a teammate or schedules aren't lining up, let your TA know.

1. Get started

2. Plan for iteration

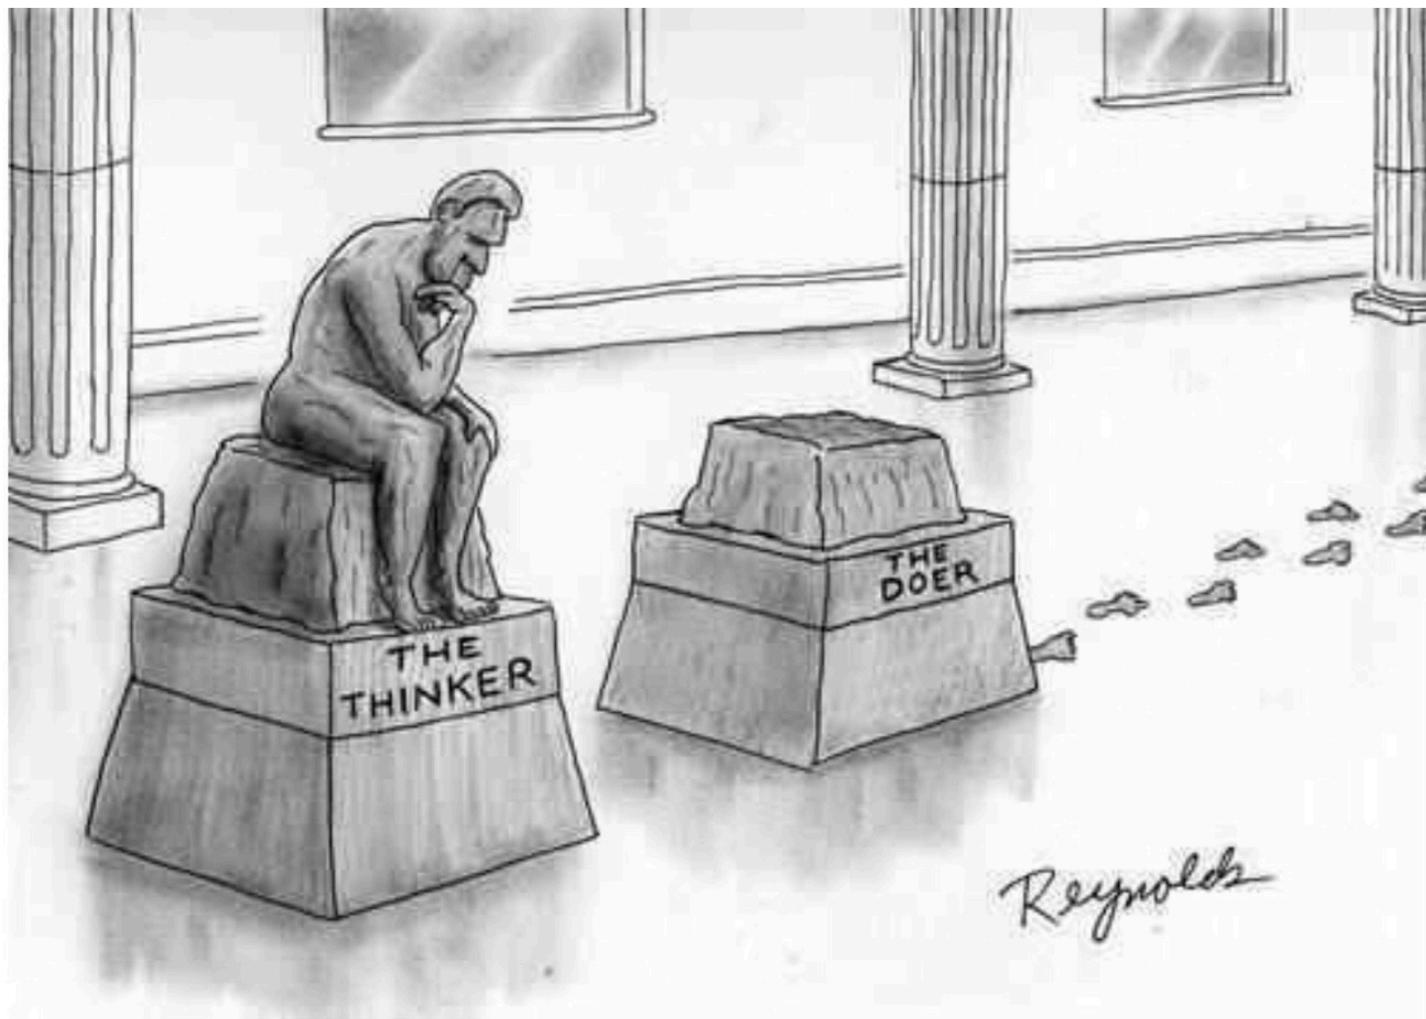

3. Keep the user at the center of the process

1. Get started

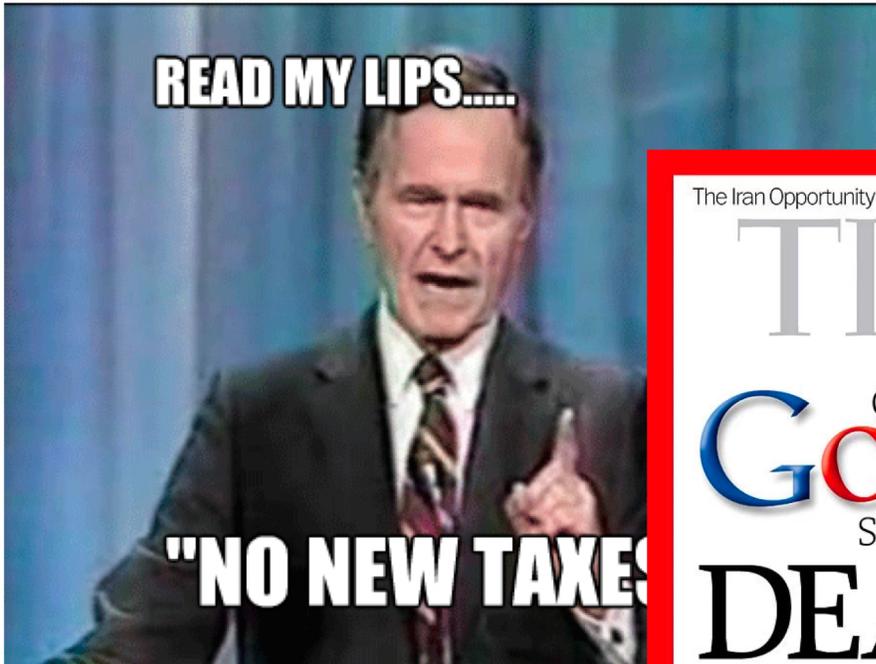

We all have ideas, dreams, thoughts.
Most stay in our heads.
Challenge yourself act on it.

Discover if it is something great, or something you
should move on from.

What's the trap of grand, general goals?

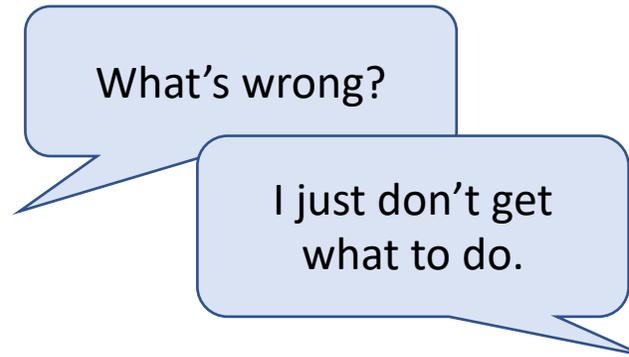

They aren't actionable.

How to get started

Find a user

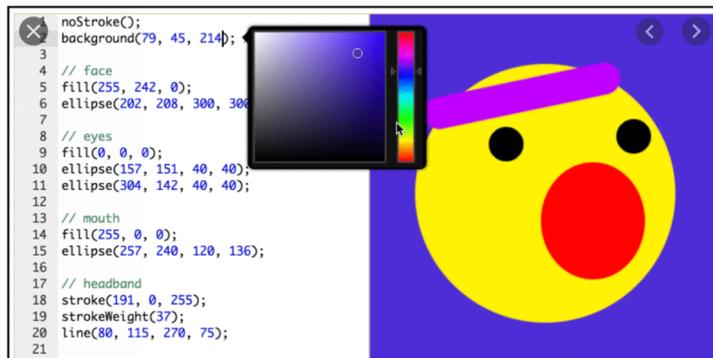

Interview someone

Prototype it

Competitor Research

Break it down

Talk to users

- Don't expect users to tell you what they need.
- Ask users tell you about their experiences, their thoughts, their feelings.
- You synthesize it into ideas that you bring back to them.
- Try Co-design. If users have the time and interest, include them in the design process.
 - Anyone can build a Google Doc prototype, or draw on a piece of paper.

If you ask “What are your problems?” you get things like this.

I hate homework

I hate taxes

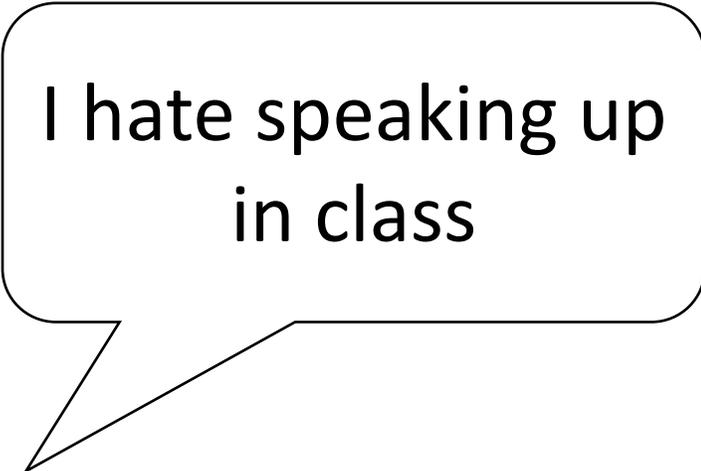

I hate speaking up in class

I hate eating vegetables

I hate my cell phone carrier

These answers doesn't provide us with the details we need to understand the problem.

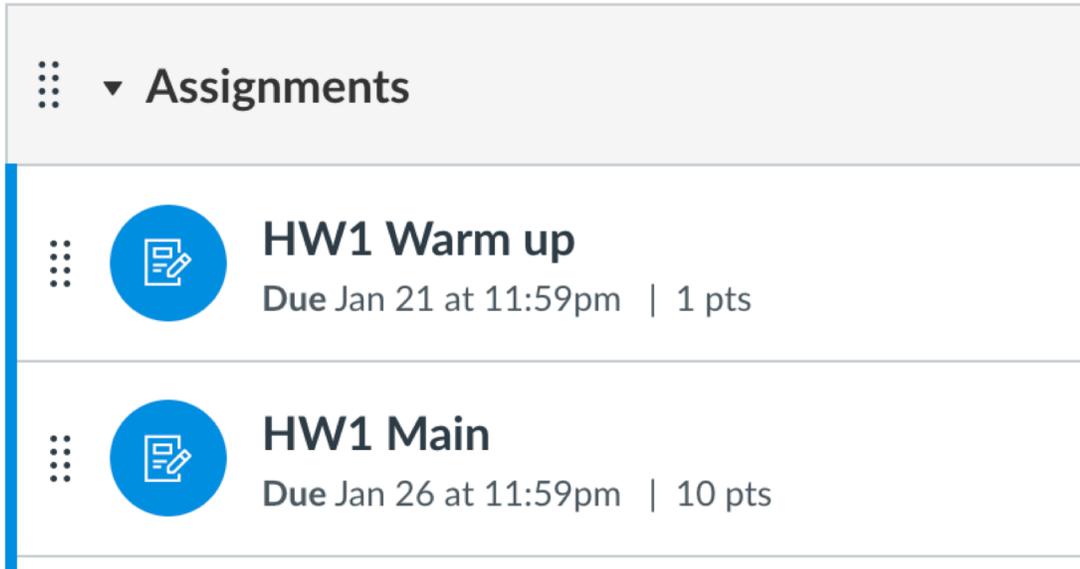

To find insights and opportunities to help users,
we need to dig into the details of their experience.

I hate speaking up
in class

What's the experience of
speaking up in class?

The warm ups were an effort to get started on assignments

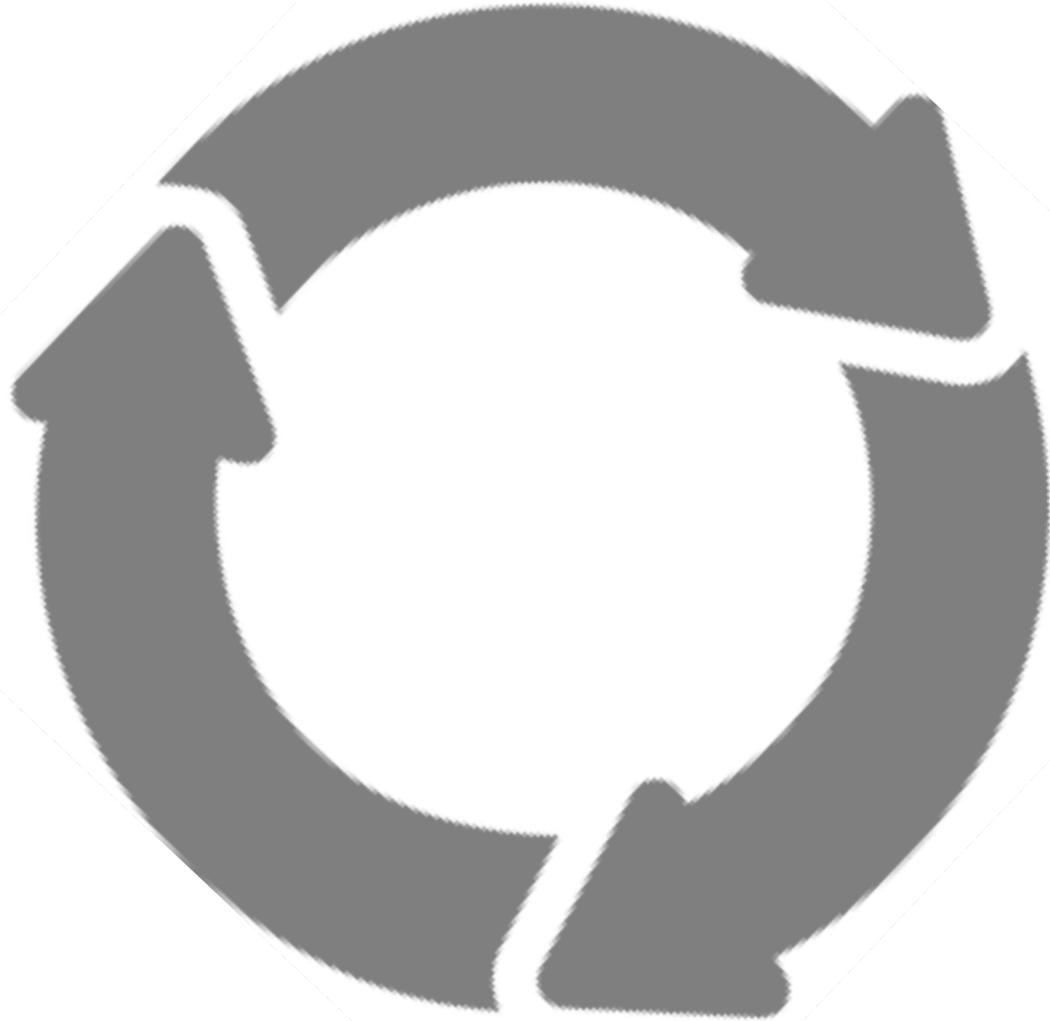

The screenshot shows a list of assignments under a grey header labeled "Assignments". There are two items listed: "HW1 Warm up" and "HW1 Main". Each item has a blue circular icon with a document and pencil symbol, followed by the assignment name, due date, and point value. A blue vertical bar is on the left side of the list.

Assignments	
	HW1 Warm up Due Jan 21 at 11:59pm 1 pts
	HW1 Main Due Jan 26 at 11:59pm 10 pts

“Annoying but often useful.”

2. Plan for iteration

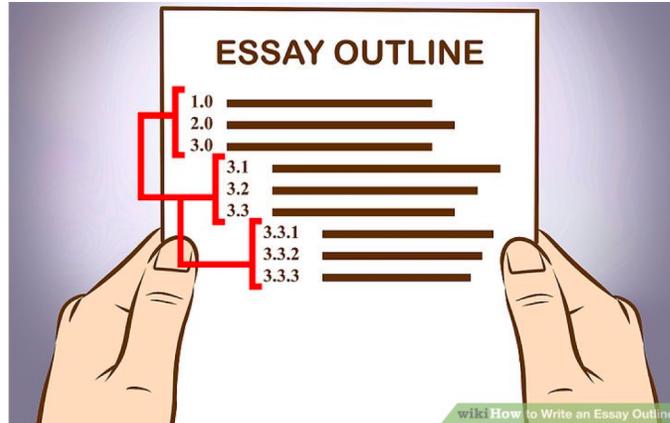

Pixar starts with a storyboard to test coherency

Other domains with low-fi prototypes to explore ideas and iterate.

Essays: outlines

Acting: Table reads

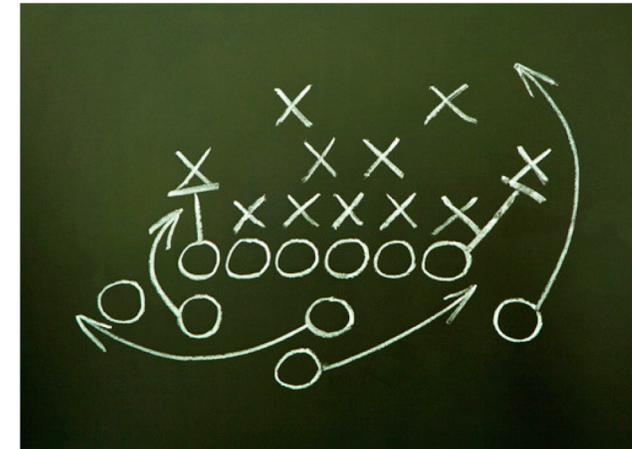

Painting: Sketches

Fashion: Sketches

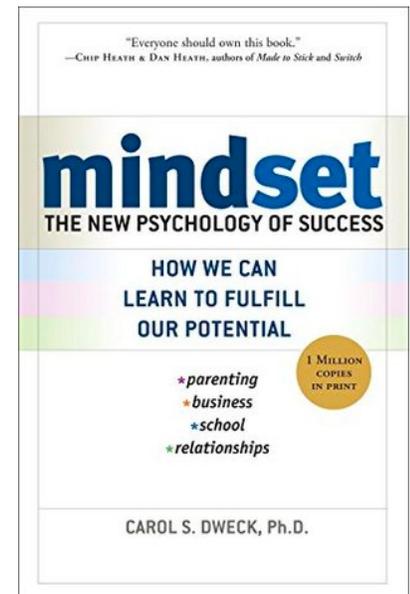

Sports: Diagram "plays"

Why do we need to iterate?

~~Because design is hard and you're stupid~~

Because design solutions are unknown,
and you need to explore options.

Plan for iterations of your video.

Iteration 1

- **Just get started.**
- It will be terrible, but now you have something to start from.

Iteration 2

- **Less terrible.**
- Possibly has basic structure
- Smoothed out some local issues.
- Probably has some distracting problems on the details

Iteration 3

- **Viewer can get the basic ideas**
- Coherent story.
- No distracting errors
- Not perfect!

Iteration 4

TA feedback: nailing the important details.
(or finding out you're off base)

3. Keep the user at the center of the process

Starting with a specific person and problem allows you to understand the problem and test various solutions.

Math test paper titled "Fraction Test: Review of Fraction Concepts".

Compare the fractions (or $>$, $=$, or $<$):

1. $6\frac{10}{12}$ vs $6\frac{11}{12}$ 2. $9\frac{3}{4}$ vs $8\frac{6}{8}$ 3. $\frac{8}{8}$ vs $\frac{11}{12}$

4. $\frac{6}{10}$ vs $4\frac{1}{10}$ 5. $\frac{12}{10}$ vs $\frac{6}{10}$ 6. $8\frac{5}{10}$ vs $8\frac{6}{10}$

Calculate (reduce to smallest terms):

7. $1\frac{1}{2} \times 2\frac{2}{3} =$ 8. $8\frac{1}{2} - 5\frac{2}{3} =$ 9. $4\frac{1}{4} - 2\frac{2}{4} =$

10. $7\frac{2}{10} - 4\frac{4}{10} =$ 11. $9\frac{1}{10} + 3\frac{5}{10} =$ 12. $7\frac{1}{3} + 3\frac{1}{3} =$

13. $2\frac{5}{10} \times 1\frac{2}{10} =$ 14. $2\frac{1}{10} \times 7\frac{6}{10} =$ 15. $4\frac{2}{3} \times 3\frac{1}{3} =$

16. $4\frac{3}{10} \times 2\frac{4}{10} =$ 17. $9\frac{1}{10} - 7\frac{2}{10} =$ 18. $6\frac{1}{3} + 9\frac{1}{3} =$

Simplify the Fractions:

19. $\frac{12}{18} =$ 20. $\frac{13}{18} =$ 21. $\frac{12}{18} =$ 22. $\frac{11}{18} =$

23. $\frac{12}{18} =$ 24. $\frac{22}{18} =$ 25. $\frac{12}{18} =$

Coursedog Raises \$17M to Break Down Barriers in Higher Education

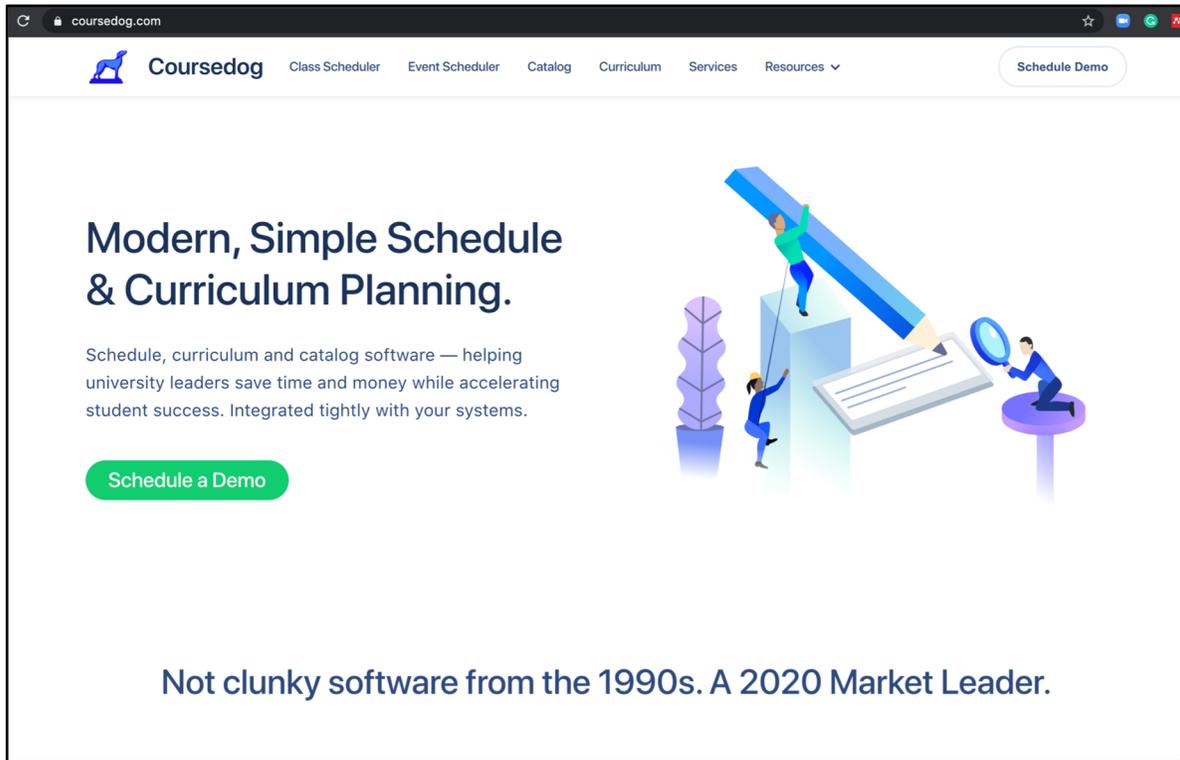

Modern, Simple Schedule & Curriculum Planning.

Schedule, curriculum and catalog software — helping university leaders save time and money while accelerating student success. Integrated tightly with your systems.

[Schedule a Demo](#)

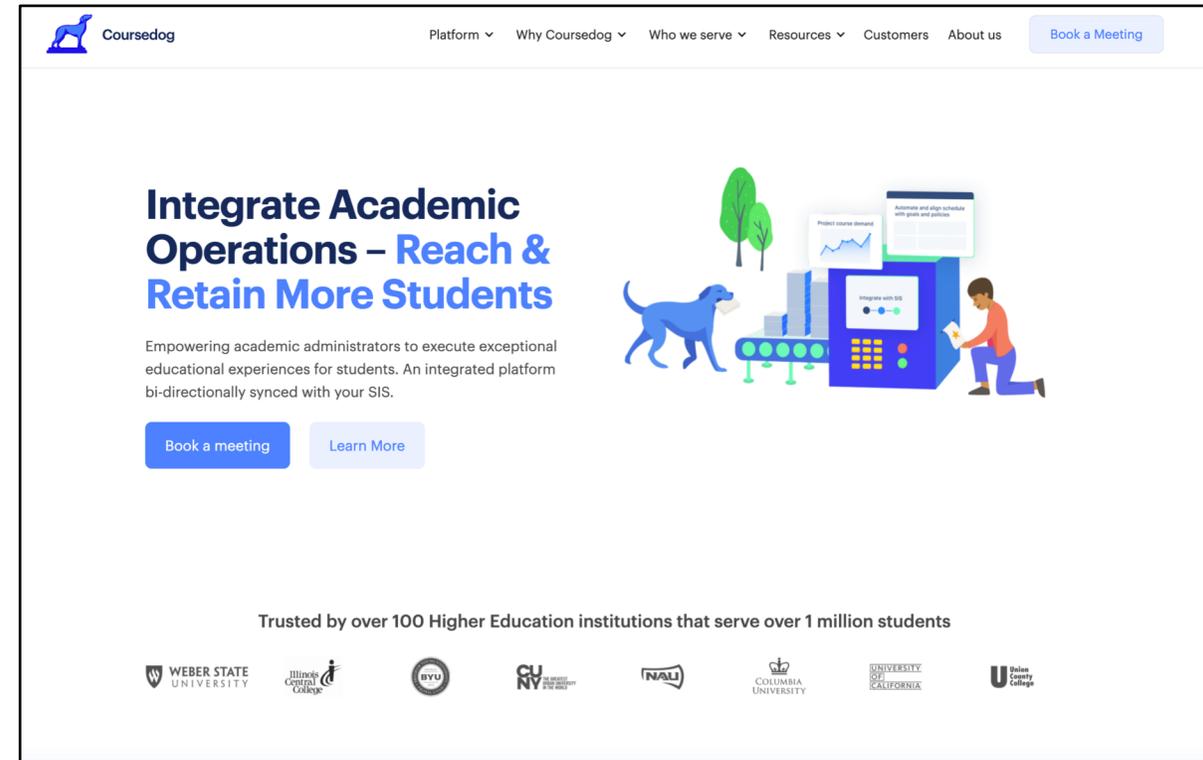

Not clunky software from the 1990s. A 2020 Market Leader.

Generalize from “Scheduling” to “Academic Operations”

The screenshot shows the Coursedog website homepage from 2019. The navigation bar includes links for Class Scheduler, Event Scheduler, Catalog, Curriculum, Services, and Resources, along with a Schedule Demo button. The main headline reads "Modern, Simple Schedule & Curriculum Planning." Below this, a sub-headline states: "Schedule, curriculum and catalog software — helping university leaders save time and money while accelerating student success. Integrated tightly with your systems." A green "Schedule a Demo" button is prominently displayed. To the right, an illustration depicts a person climbing a large blue pencil that is writing on a document, with another person looking through a magnifying glass at the document. At the bottom, the text reads: "Not clunky software from the 1990s. A 2020 Market Leader."

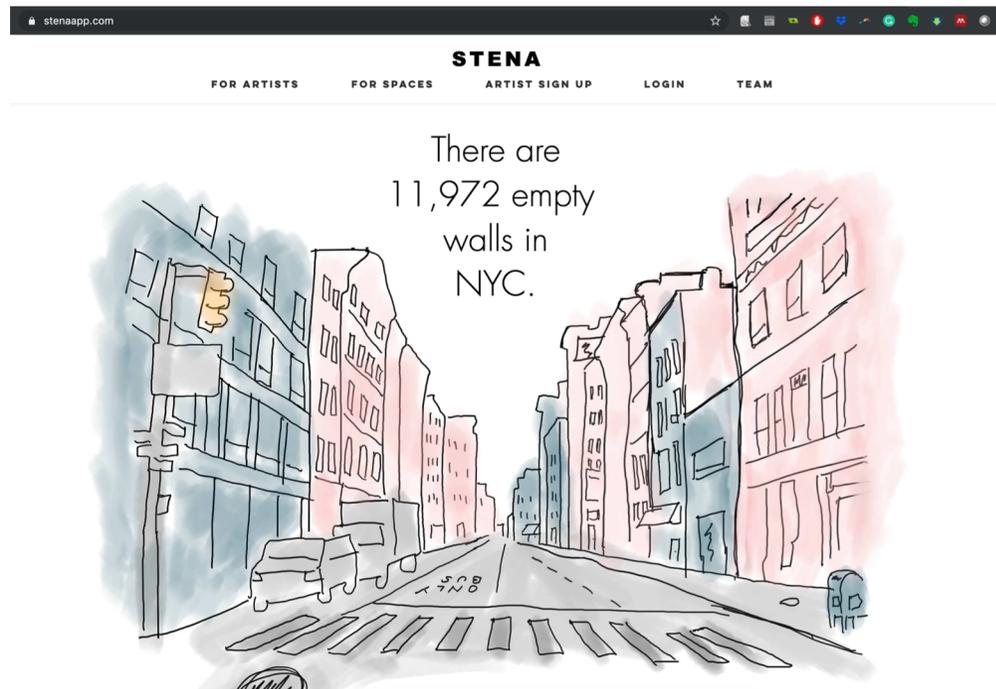

2019

The screenshot shows the Coursedog website homepage from 2022. The navigation bar includes links for Platform, Why Coursedog, Who we serve, Resources, Customers, and About us, along with a Book a Meeting button. The main headline reads: "Integrate Academic Operations – Reach & Retain More Students." Below this, a sub-headline states: "Empowering academic administrators to execute exceptional educational experiences for students. An integrated platform bi-directionally synced with your SIS." Two buttons, "Book a meeting" and "Learn More", are visible. To the right, an illustration depicts a blue dog, a person kneeling next to a computer monitor displaying a graph, and a person standing next to a large blue box labeled "Integrate with SIS". At the bottom, the text reads: "Trusted by over 100 Higher Education institutions that serve over 1 million students." Below this text, logos for Weber State University, Illinois Central College, BYU, CU NV, NAU, Columbia University, University of California, and Union County College are displayed.

- **Idea:** Pair people up in the same dorm
 - UI Similar to Tinder, only see people in your dorm
 - Useful because of Covid restrictions junior year

What about AI and Design?

Are we going to have jobs in the future?

Designing for Generative AI

COMS 6998 sec 11 Fall 24
Prof Lydia Chilton

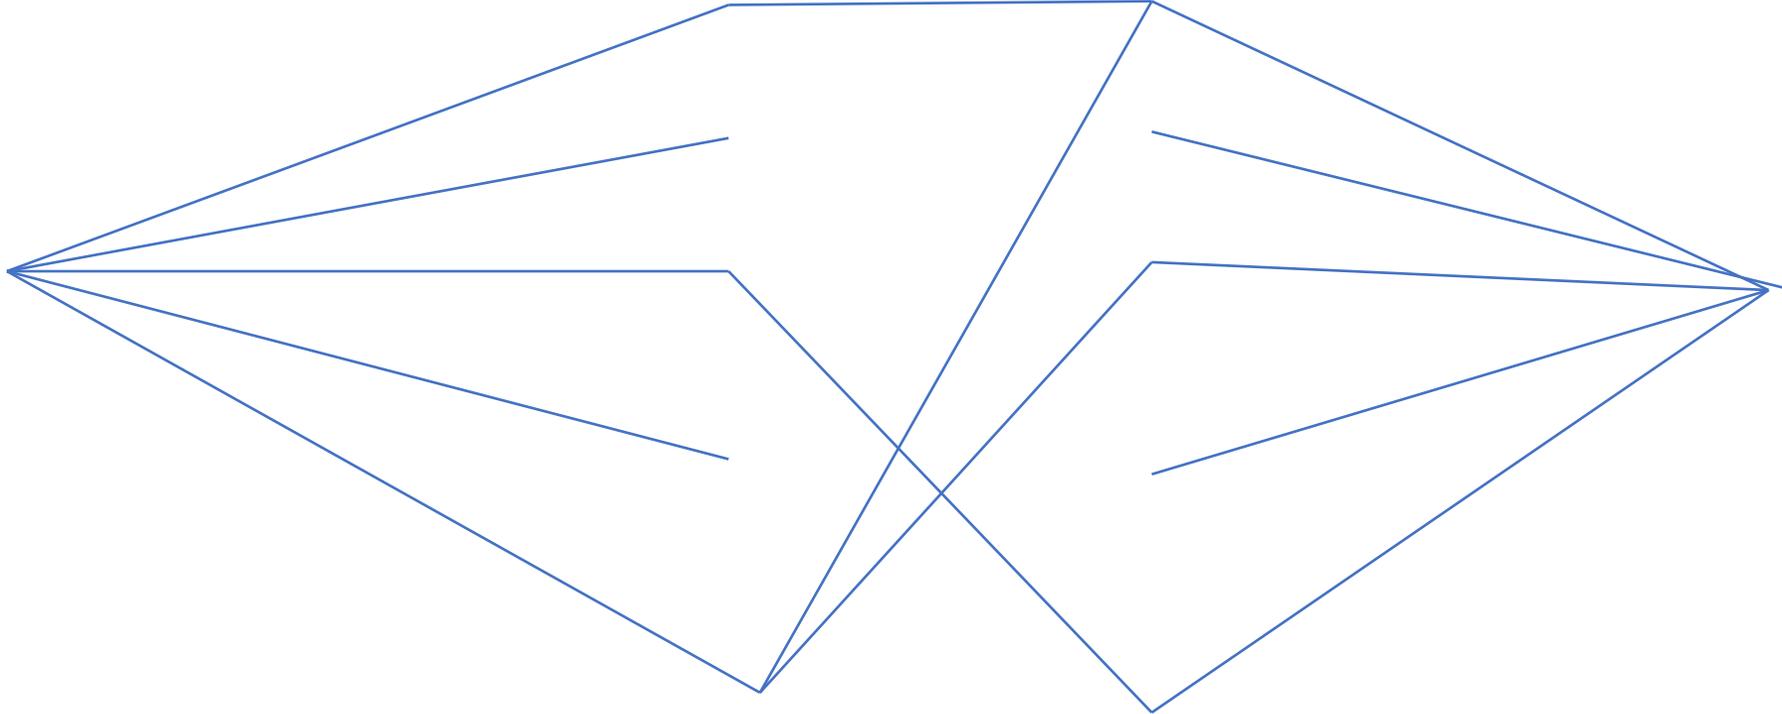

Designing for Emerging Technology is about matching between tech and people.

What can the tech do?

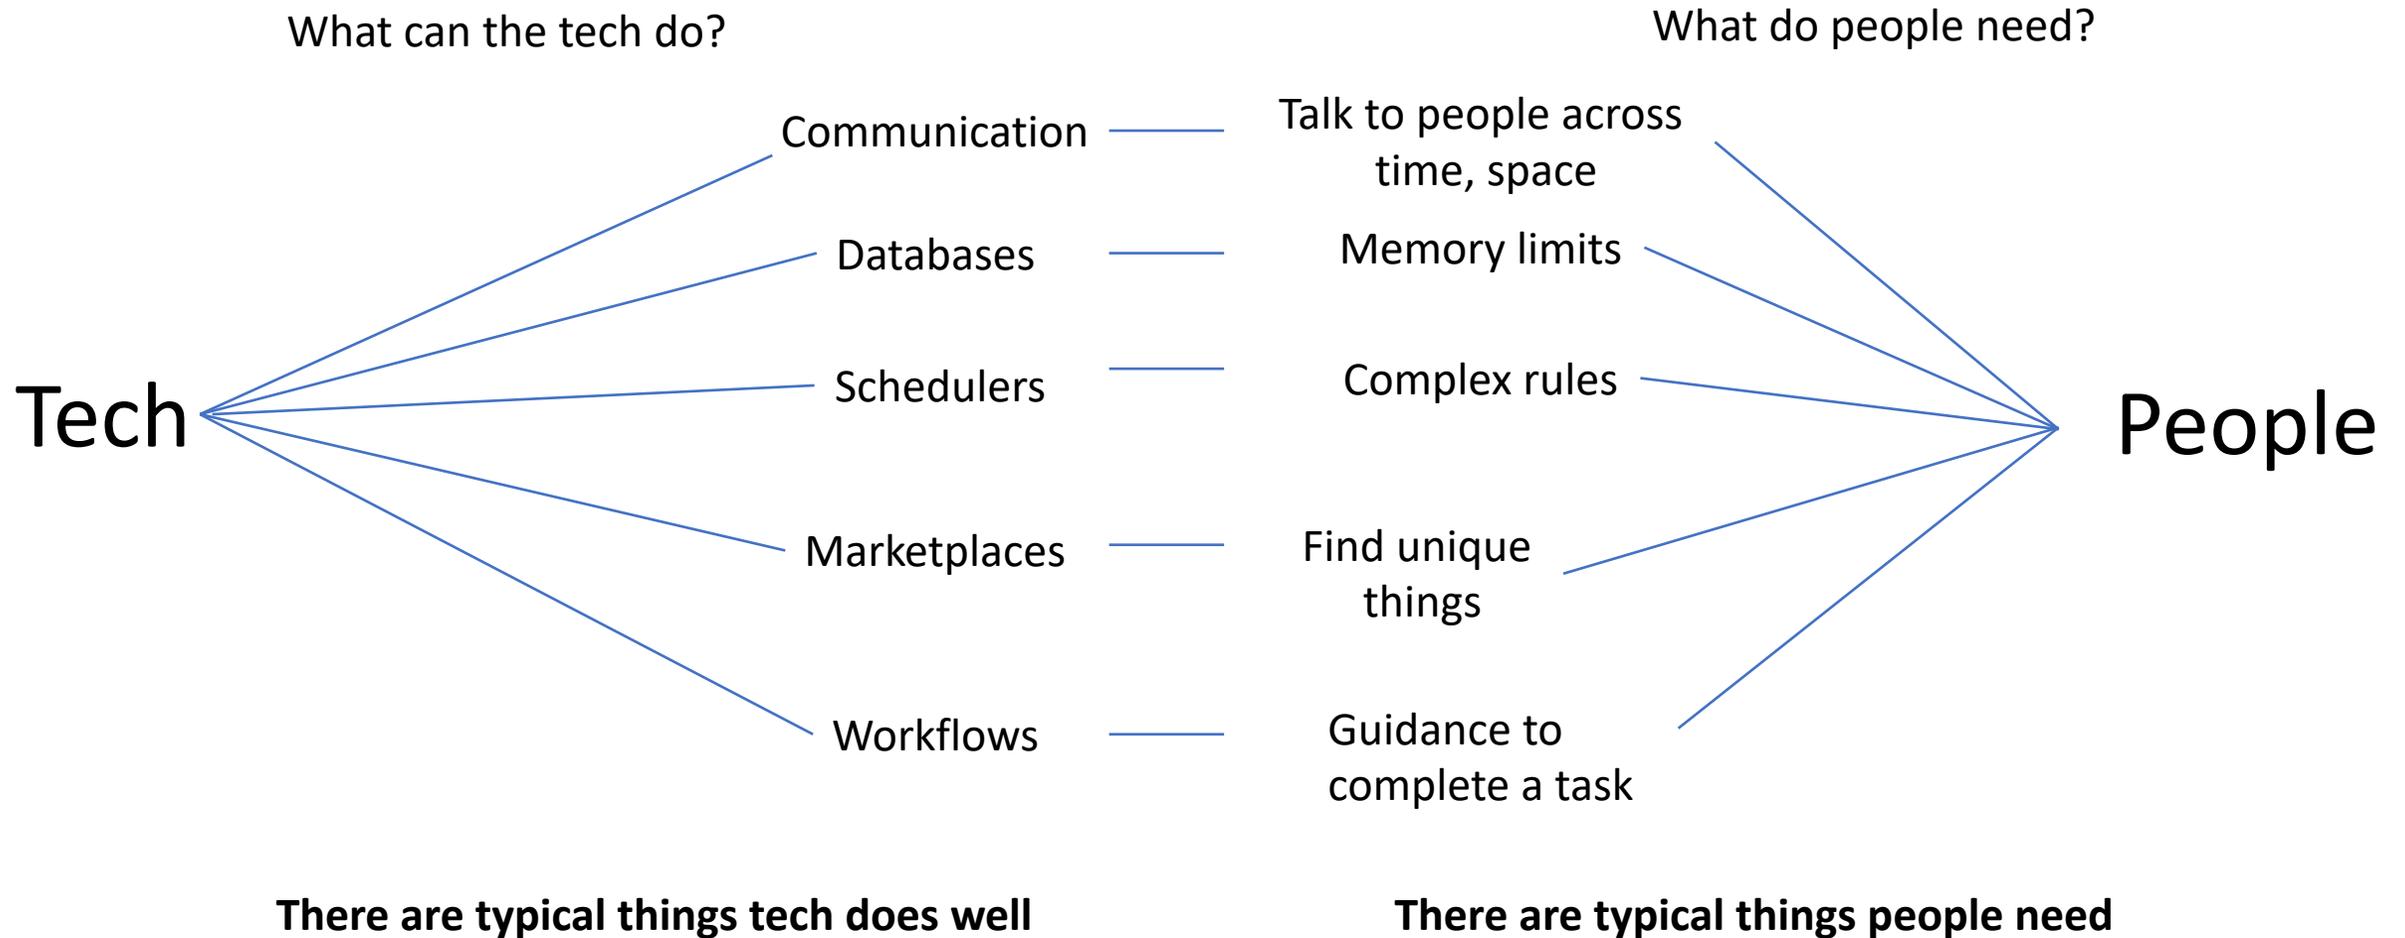

What do people need?

Tech

People

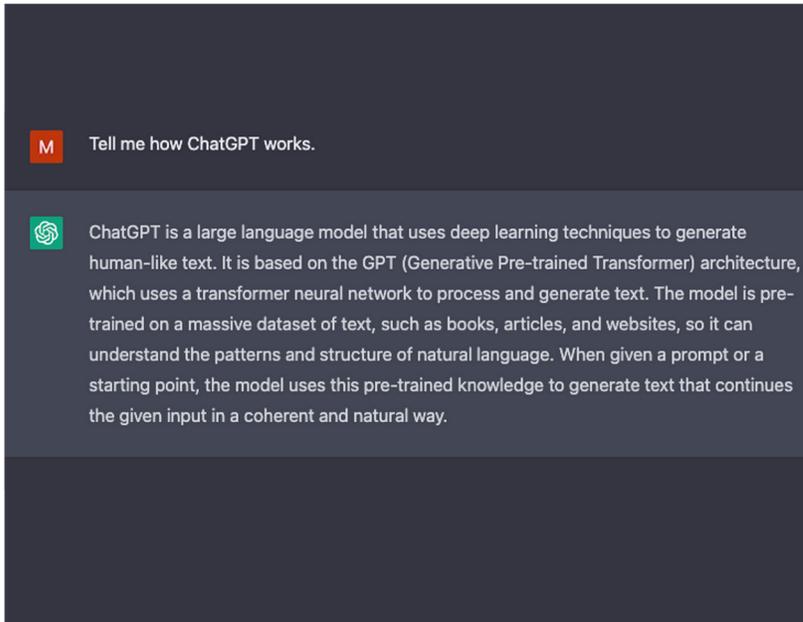

We analyze fundamental needs of people and fundamental abilities of technology.

Mostly Staff Project Mentoring

- It's like the second half of this class.
- We don't teach (much) coding.
- We do teach qualitative research methods
 - How to interview
 - How to conduct observations
 - How to do competitor analysis
 - How to synthesize results
- We'll try to accommodate as many students as we can.
- You cannot be admitted until you pass COMS 4170.

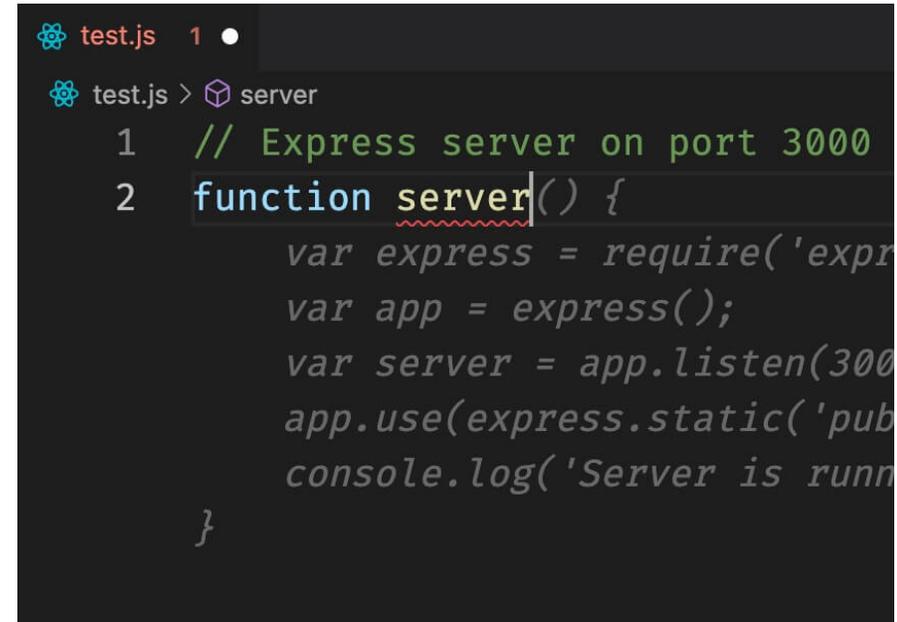

AI seems to be taking over the world

text

images

code

Everyone: AI art will make designers obsolete

AI accepting the job:

AI is impressive, but far from perfect

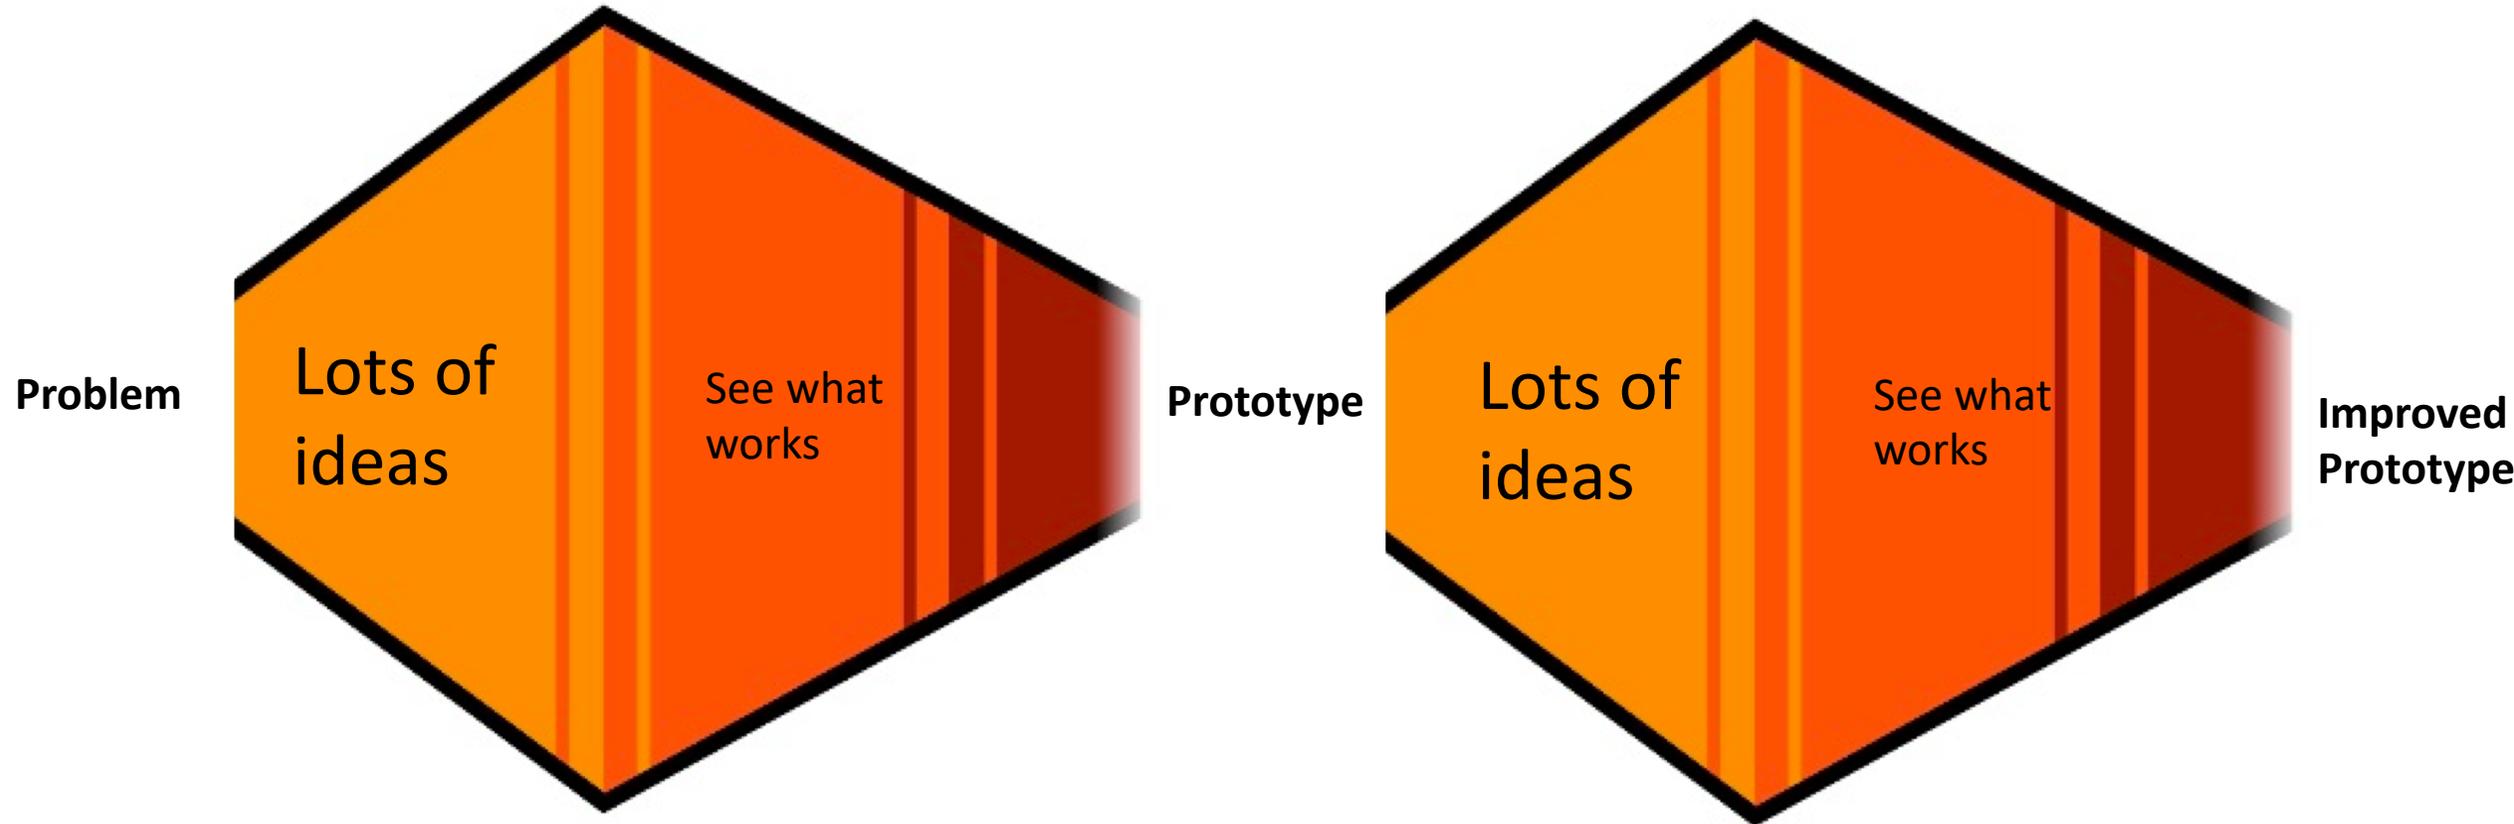

- It doesn't know what's true
- It can't evaluate what outputs will resonate with people
- It's answers are pretty basic - summarized from what's already written.

AI needs people

How do we structure human-AI collaboration?

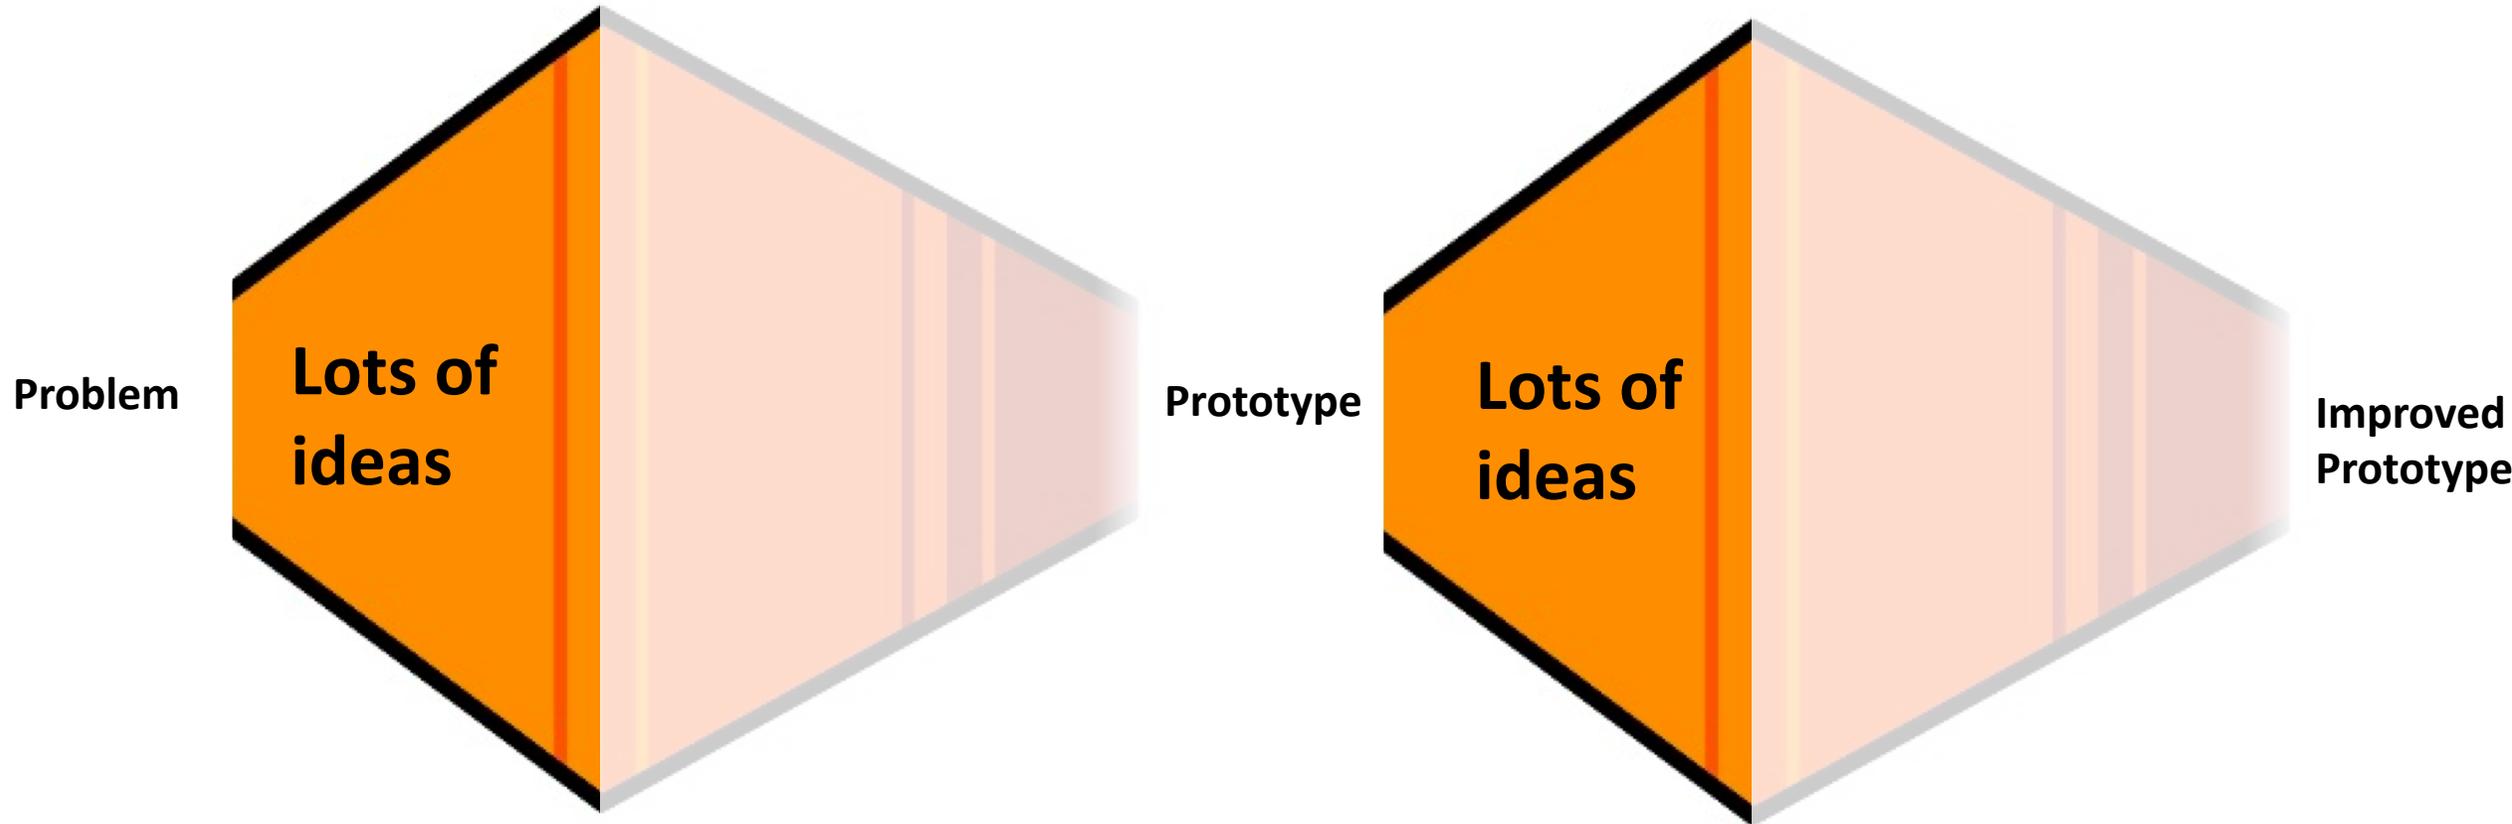

The design process is a model for innovative and creative outcomes.

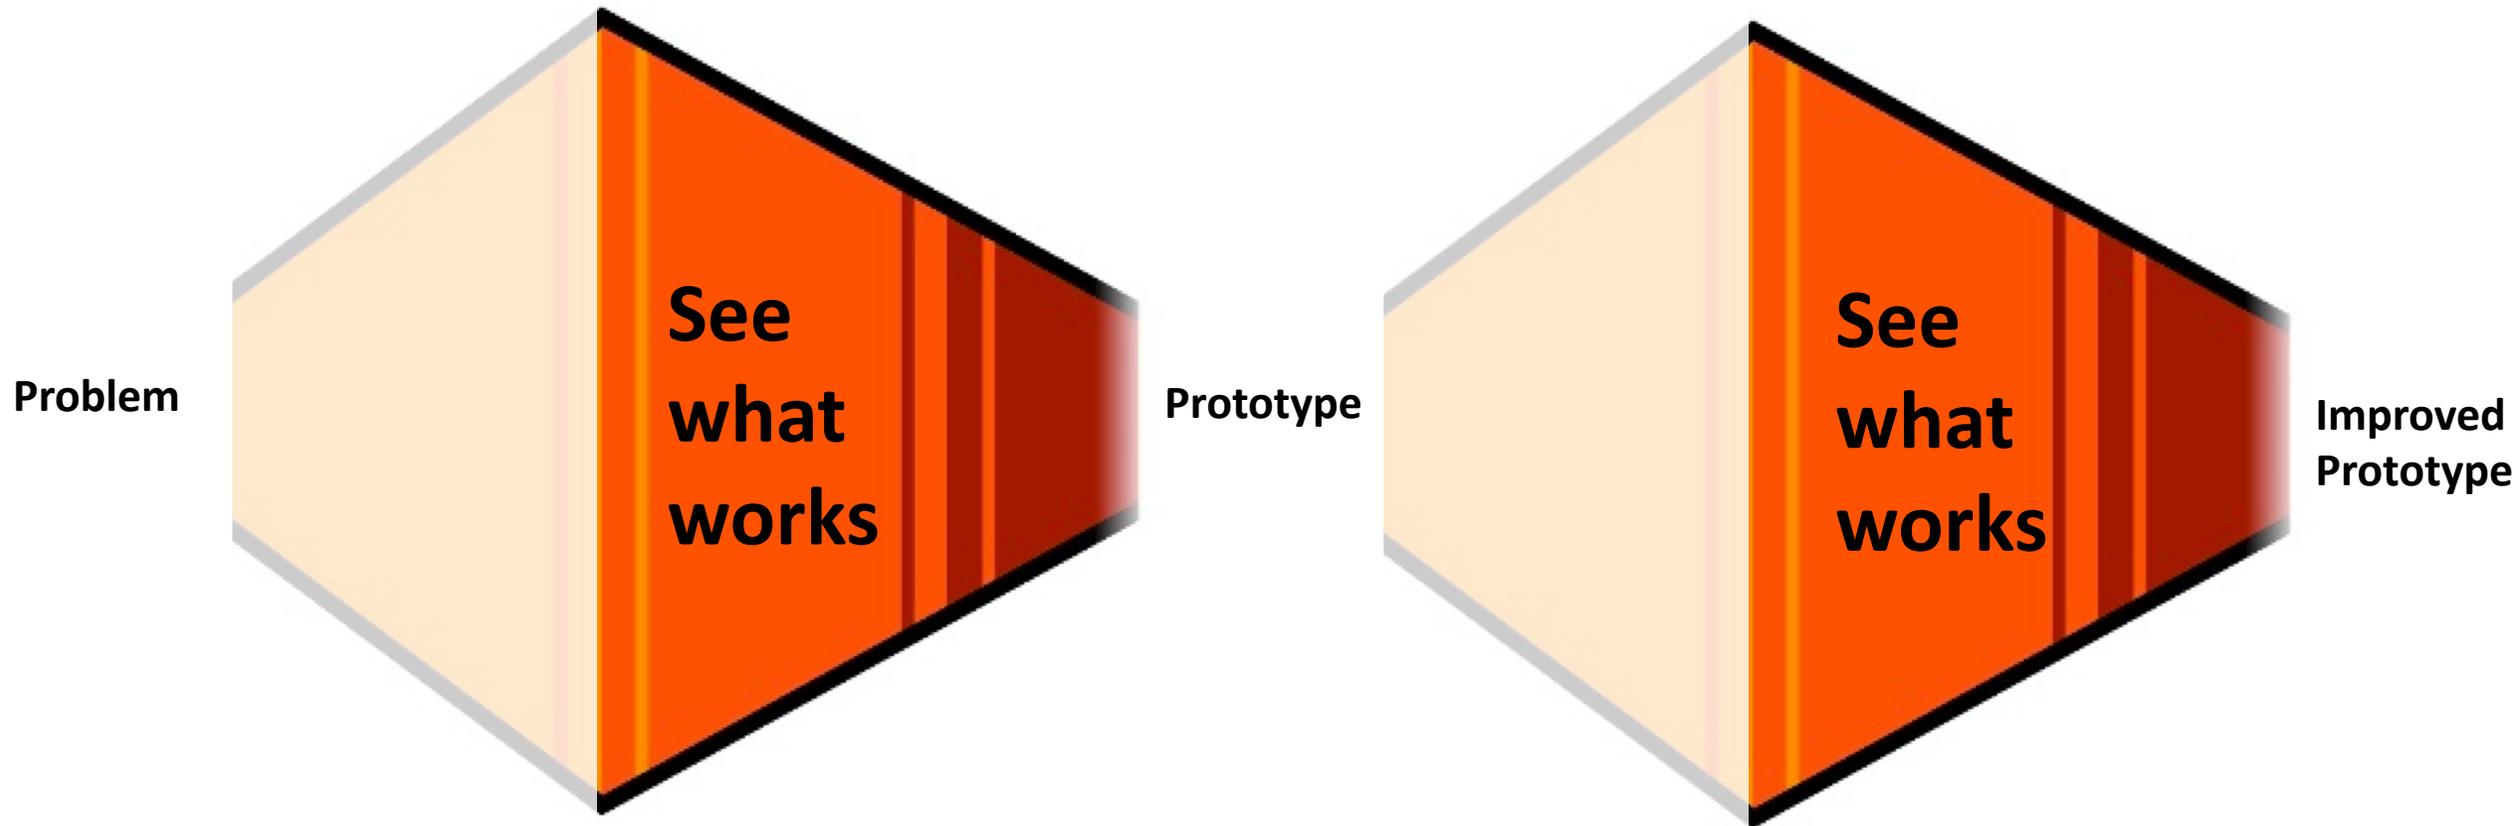

Psychology calls it divergent and convergent thinking
Designers call it flare and focus

In design, people struggle to generate many ideas and prototypes

People often fixate on a single idea...
But AI doesn't

AI struggles to understand context and evaluate outputs

But people find evaluation much easier than generation.

Humans and AI have complementary skills

AI can help:

- **Explore** the design space.
- Provide a good **starting point**.
- Create many **prototypes** quickly.

People must:

- Understand the **context and goal**
- **Pick the direction**
- **Judge** the outputs
- **Ensure a cohesive** output.

To design together, humans and AI must have a shared representation of the problem.

Mayor Adams Announces Agreement to Transform South Brooklyn Marine Terminal Into Leading Offshore Wind Hub

released: 03/03/2022

New York City Mayor Eric Adams today announced an agreement that will transform the city-owned South Brooklyn Marine Terminal (SBMT) into one of the largest offshore wind port facilities in the nation. The agreement will help establish New York as a leader in offshore wind and help the New York City meet its nation-leading climate goals of 100 percent clean electricity by 2040.

As part of the deal finalized by the New York City Economic Development Corporation (NYCEDC), Equinor, its partner — bp — and Sustainable South Brooklyn Marine Terminal, L.P. (SSBMT) will upgrade and build out the terminal as an operations and maintenance base. The terminal will become a power interconnection site for the Empire Wind 1 project, and heavy lift platforms will be built on the 39th Street Pier for wind turbine staging and installation for Equinor and other developers. The port will serve as a hub to support the Empire Wind and Beacon Wind offshore wind farms.

NYCEDC also partnered with Equinor and the community to support workforce training for a diverse pool of local residents to bolster opportunities for New Yorkers created by investments in offshore wind infrastructure. The agreement expands the target of minority- and women-owned business enterprise (M/WBE) contractors based in and registered with New York City or New York State, with a 30 percent M/WBE participation goal; and will support technical assistance for M/WBE and Disadvantaged Business Enterprises to create more opportunities for participation in this sustainable growth industry. Additionally, the agreement ensures the development will be a low-emissions facility.

"With this investment, the South Brooklyn Marine Terminal will soon be transformed into one of the largest offshore wind port facilities in the nation," said Mayor Eric Adams. "This site will be the launch of a whole new industry for New York City that will support 13,000 local jobs over time, generate \$1.3 billion in average annual investment citywide, and significantly reduce our carbon footprint so that we can meet our climate goals of 100 percent clean electricity by 2040. This is a transformative moment for New York City and our clean energy future — a future of sustainable power, good-paying jobs, and climate justice."

"This first major milestone in New York City's Offshore Wind Vision Plan is a perfect example of how our economic and workforce development objectives must go hand in hand with our clean energy goals. By building this new industry in the right way, we will continue to advance an equitable recovery and make our environment healthier as well," said Deputy Mayor for Economic and Workforce Development Maria Torres-Springer. "We thank NYCEDC and our partners at Equinor, bp, and SSBMT for coming together to transform the South Brooklyn Marine Terminal into a major offshore wind hub and make New York City a leading destination for this important and growing industry."

"Economic, racial, and gender equity is what informs and drives our work every day," said Magalie Desroches Austin, senior advisor to the mayor; and director, Mayor's Office of Minority and Women-Owned Business Enterprises. "We're excited to support and collaborate with our partners at the NYCEDC and at the South Brooklyn Marine Terminal on this highly important initiative. Not only is this a capital investment in New York City's offshore wind energy, its accompanying infrastructure, and the emerging work force critical to the long-term sustainability of the greatest city on earth, but it also helps to meaningfully and positively move the needle on the mayor's commitment to Minority- and Women-Owned Business Enterprises and the diverse workforce they employ. We look forward to the many long-term benefits this investment will have on New York City's environmental footprint, its labor force, and the myriad of M/WBEs that make New York City unique."

Equinor also committed to establishing a \$5 million ecosystem fund to bring more New York City residents into offshore wind careers, propel offshore wind innovation, and support a just transition. Finally, Equinor is working to establish an offshore wind learning center — accessible to the community — within its Brooklyn office.

Today's announcement is critical to the offshore wind priorities and investments of both New York City and New York State. The city has committed \$191 million to offshore wind projects — including \$57 million in support of SBMT and \$134 million in new investments. The city expects these initiatives to remove more than 34 million tons of

Human-Centered Design with Harry West

IEME E4200 - Human-Centered Design and Innovation

Description

Open to SEAS graduate and advanced undergraduate students, Business School, and GSAPP. Students from other schools may apply. Fast-paced introduction to human-centered design. Students learn the vocabulary of design methods, understanding of design process. Small group projects to create prototypes. Design of simple product, more complex systems of products and services, and design of business.
